Debut

Plan it. Launch it. Grow it.

SEE IT BEFORE YOU DEPLOY IT: OWNER, LEAD, CREATOR, VIEWER AND CLIENT VIEWS

Debut Visual Tour

Every screen, every role: what the app looks like, in real screenshots.

Inside this guide

- Public pages: landing, pricing, sign-up
- The owner's view: dashboard, calendar, content, analytics
- Market Pulse and AI Studio with live research
- Team hub, client portal, billing and integrations
- What a lead, creator, viewer and client each see
- The mobile app, and three industries side by side
- New: brand colours, a freeform mood board, and a first-time tour

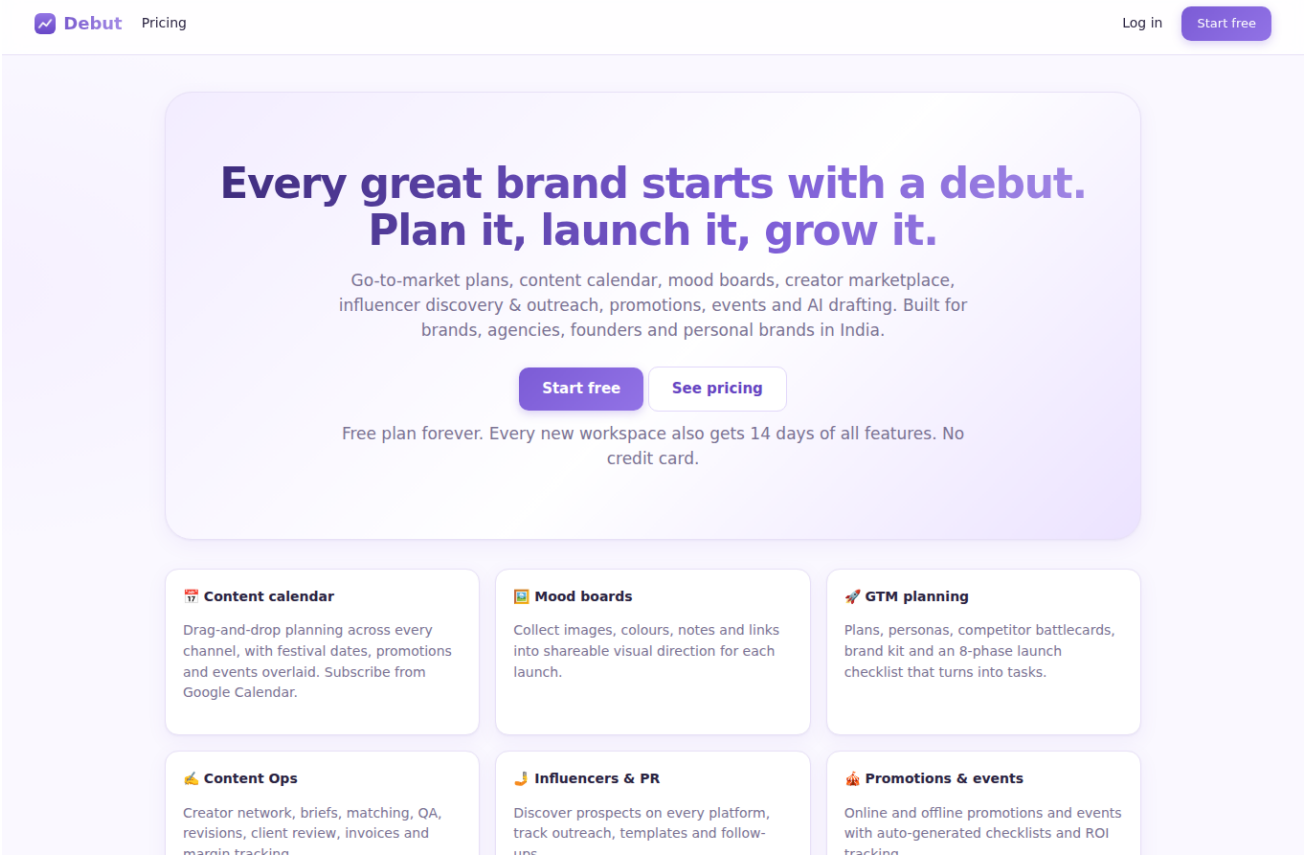

Version September 2026. Screens and limits described match Debut at the time of writing; the Pricing page always shows current pl

Contents

4. Team, client portal, reporting and account 18
5. On a phone: the installable app 24
6. What each role actually sees 25
7. Three more industries, one app 32
8. New: brand colours, a freeform mood board, and a first-time tour 36

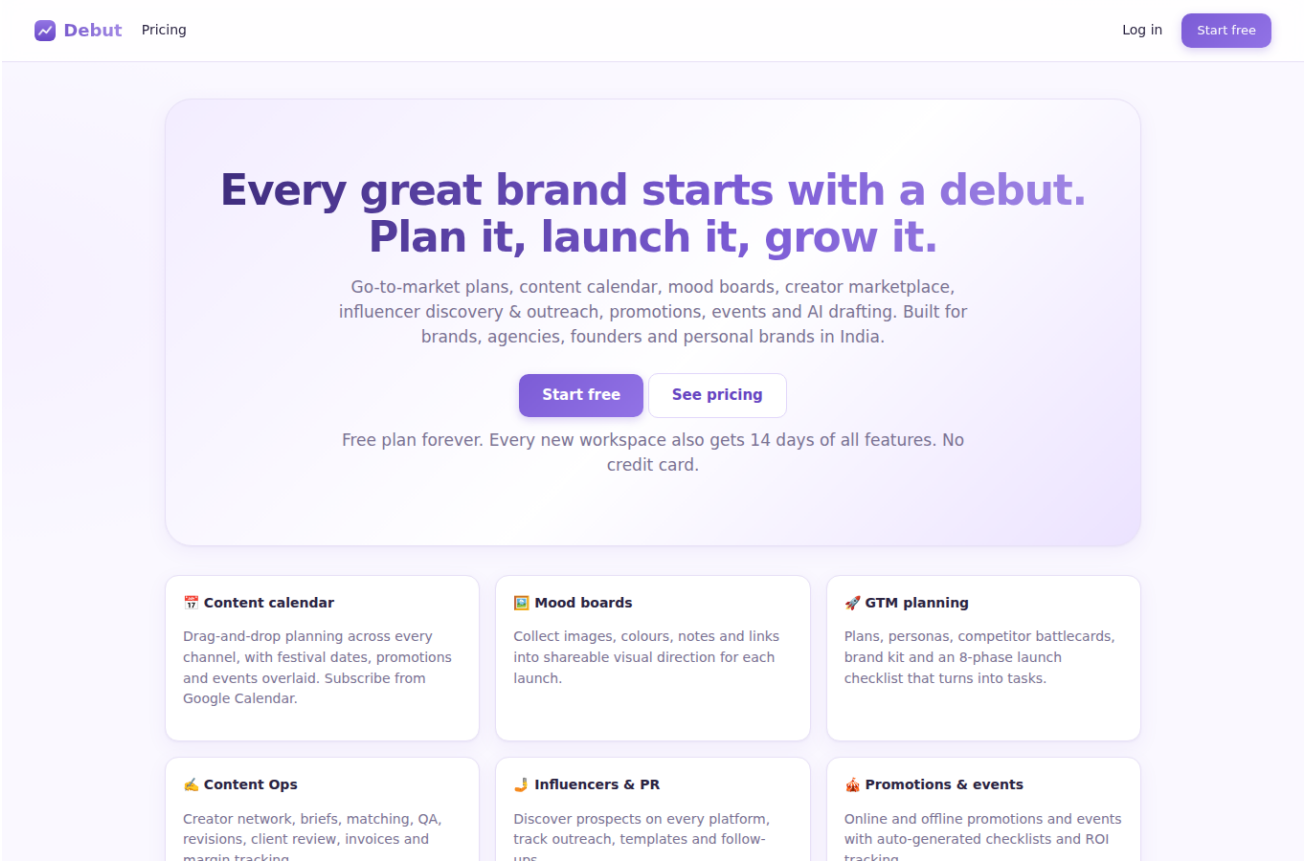

1. Before you sign in: the public pages

What a visitor sees before creating an account: the landing page, pricing, and the sign-up and login screens. These are the same on every plan and every industry.

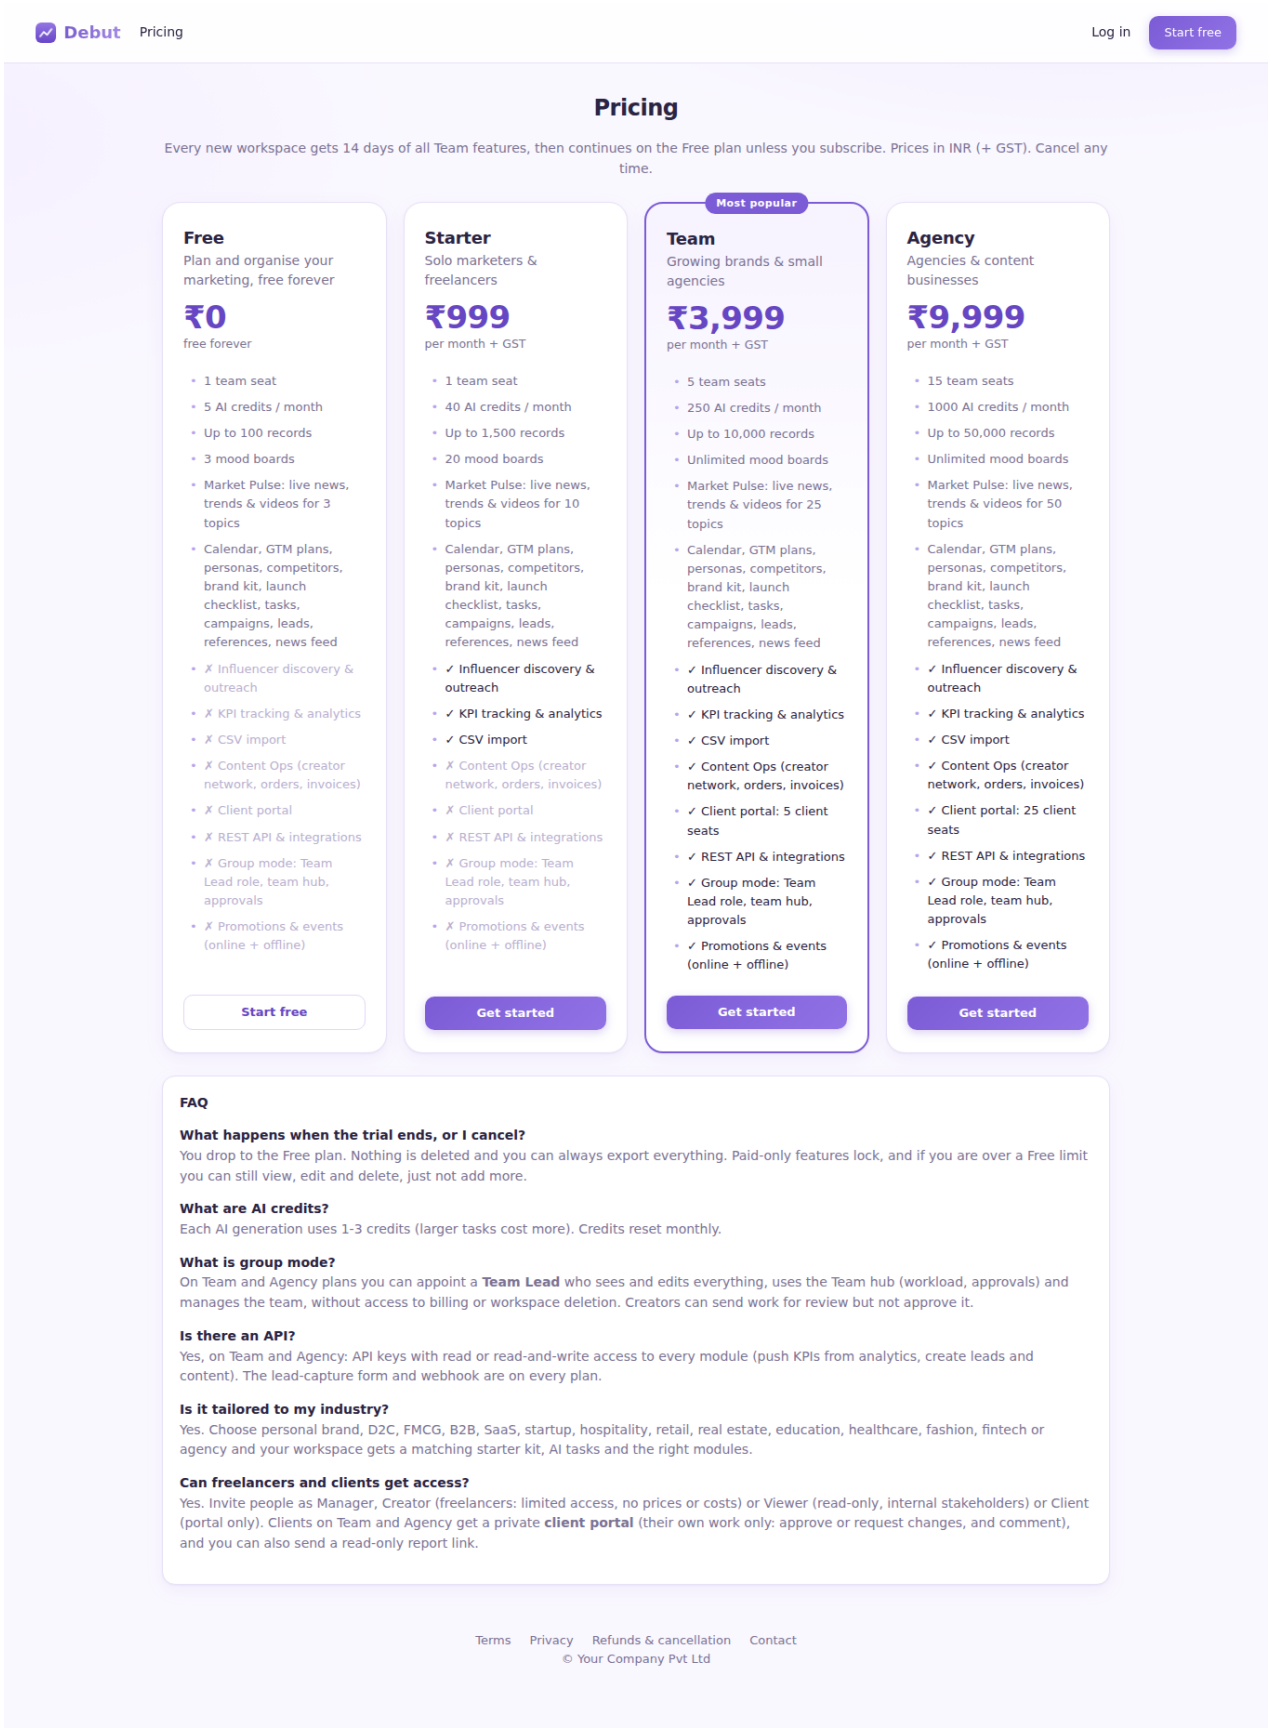

The landing page: hero section

Headline, the free-plan offer, and the first row of feature cards.

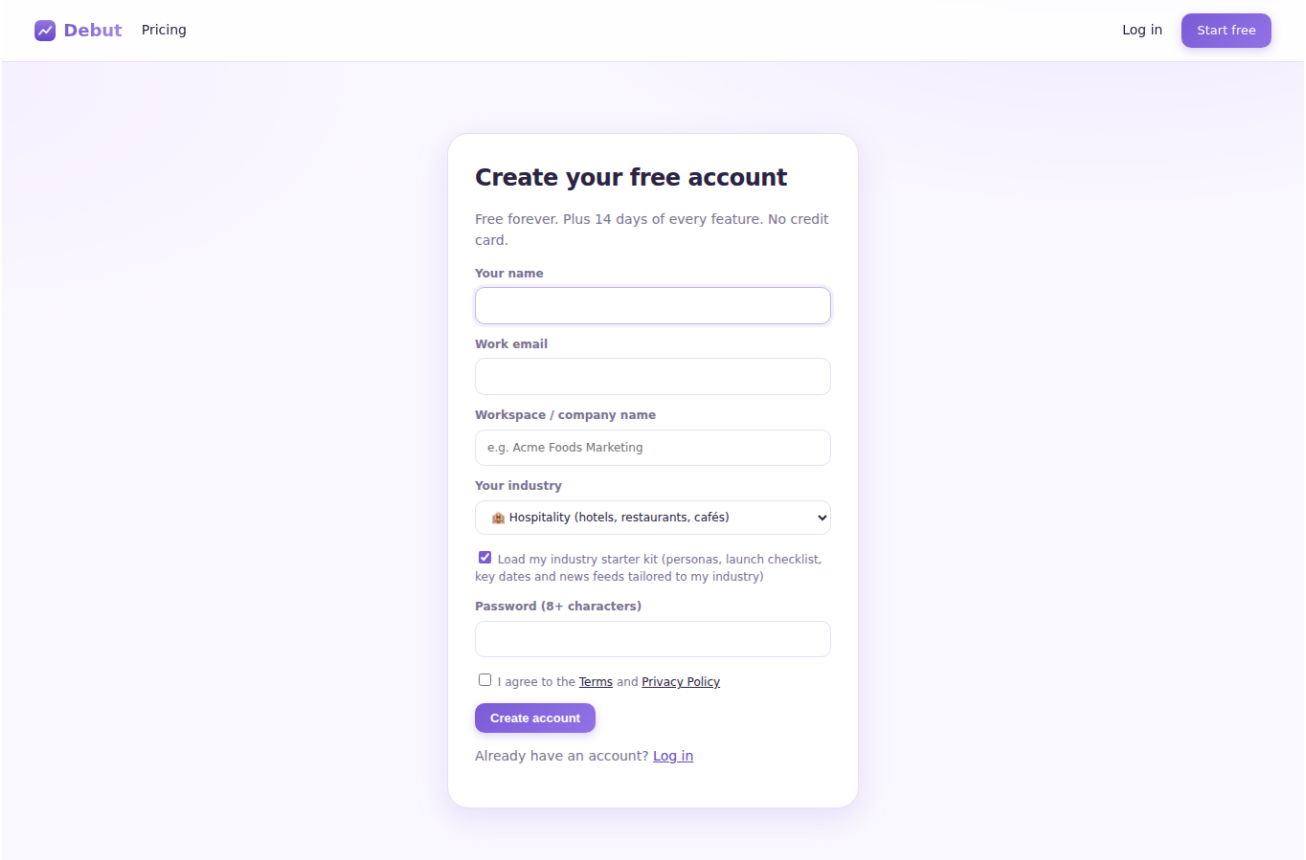

The landing page: features and industries

Scrolling down: collaboration, live Market Pulse, security, mobile, and the full list of industries Debut is built for.

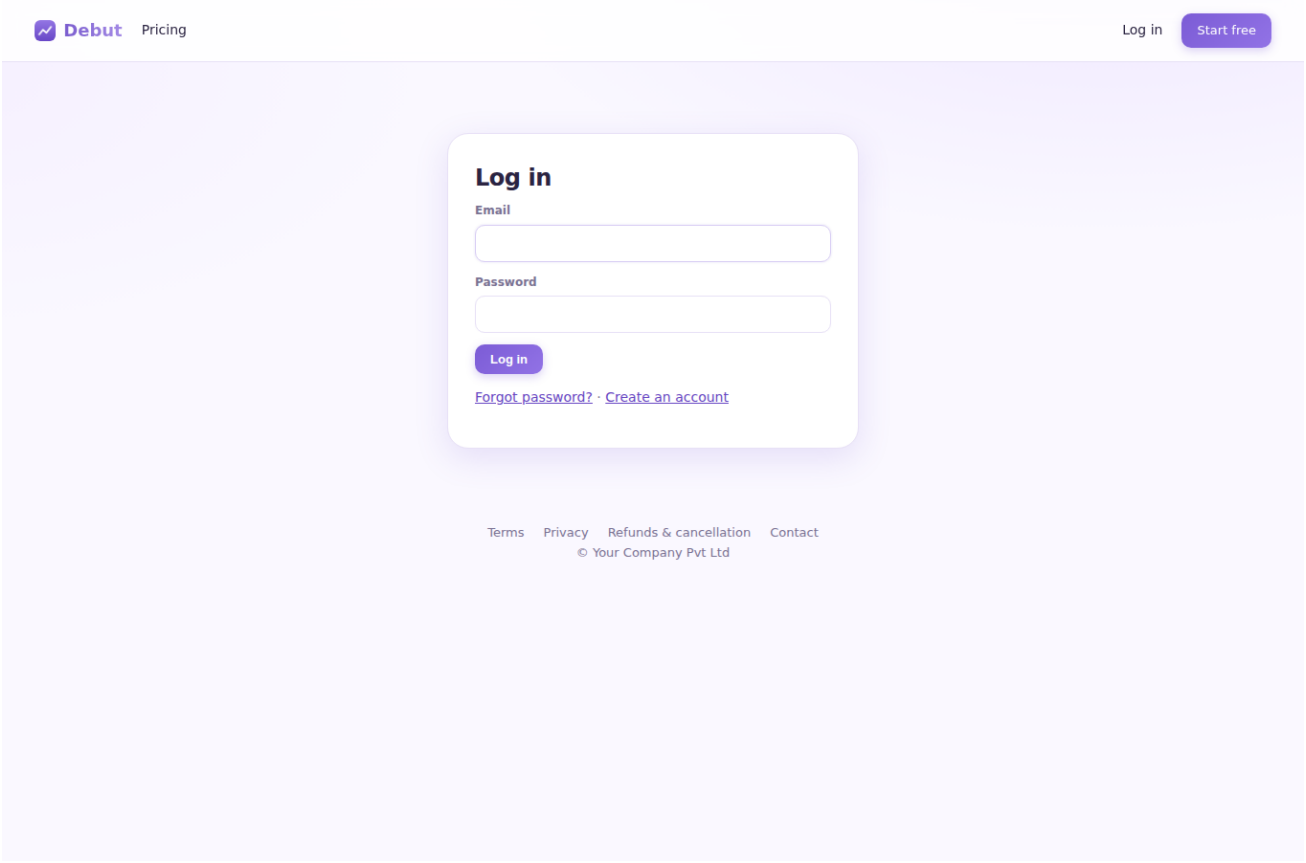

The pricing page

All four plans side by side, with every feature and limit spelled out. This is also what a customer sees when they open Plan & billing inside the app.

Sign-up, with the industry picker

Choosing an industry (here: Hospitality) loads that industry's starter kit automatically: checklist, key dates, news feeds, personas and Idea Bank content.

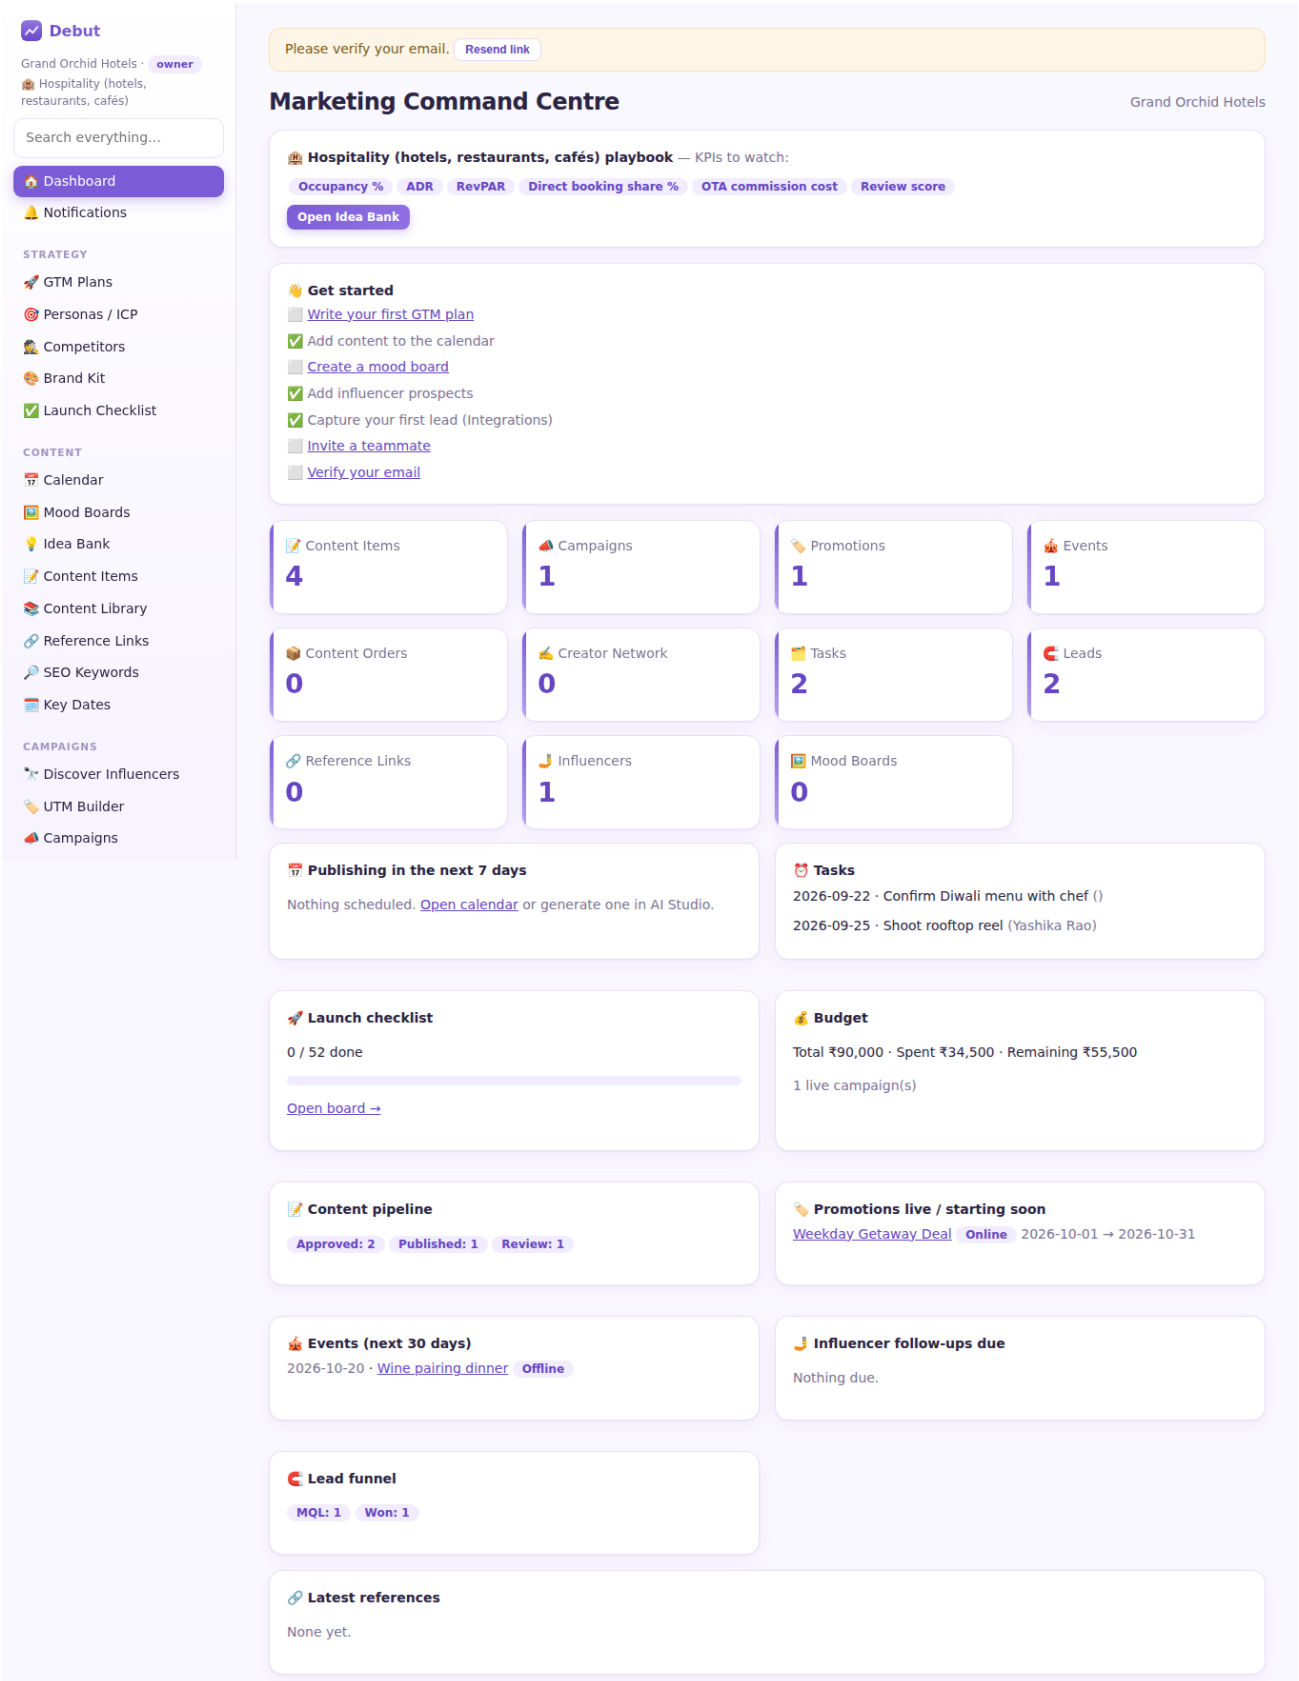

The login screen

Plain and fast. Two-factor login (section 4) adds one more screen after this, only for accounts that have turned it on.

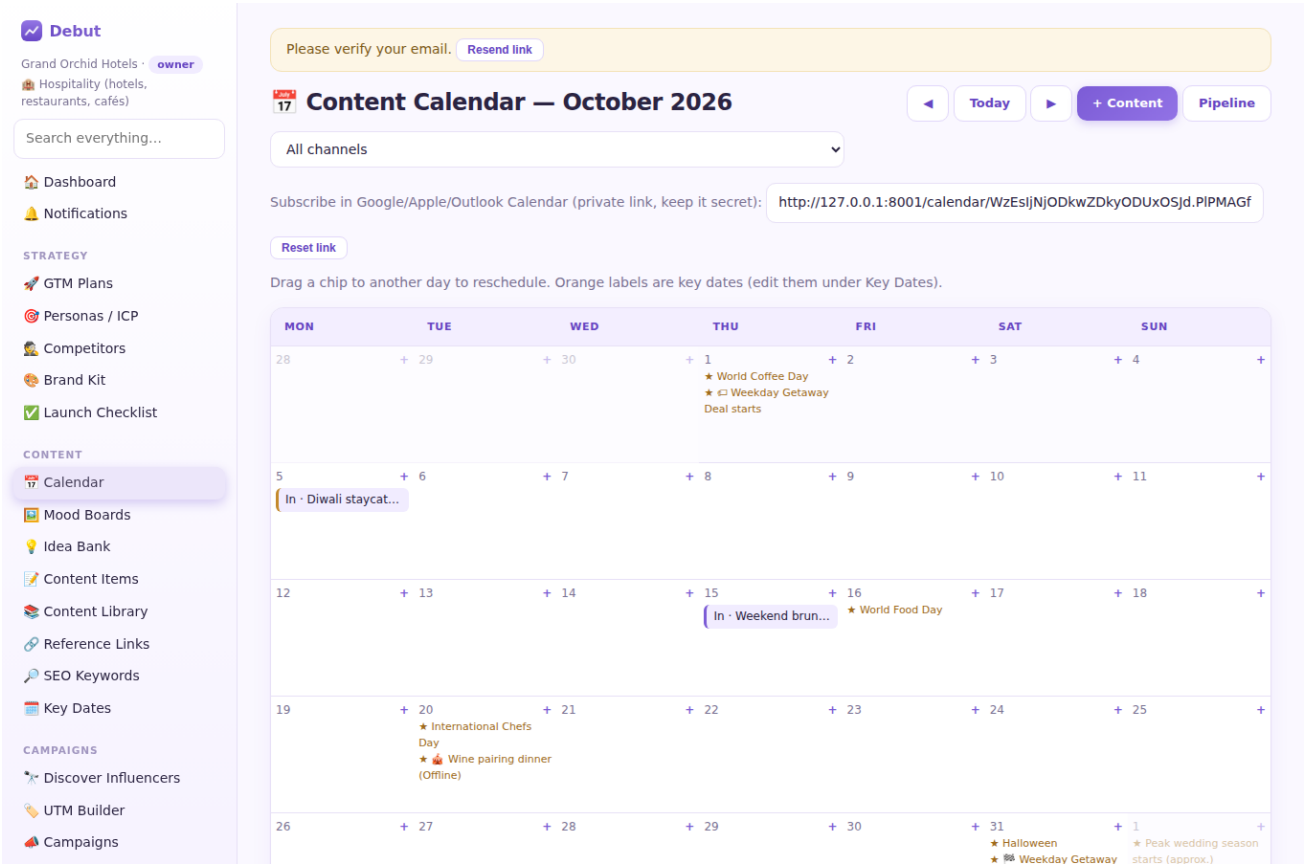

2. The owner's dashboard and day-to-day work

Everything below is the same workspace, Grand Orchid Hotels, a hospitality business, seen as its owner. This is the fullest view in the app: every module, every widget.

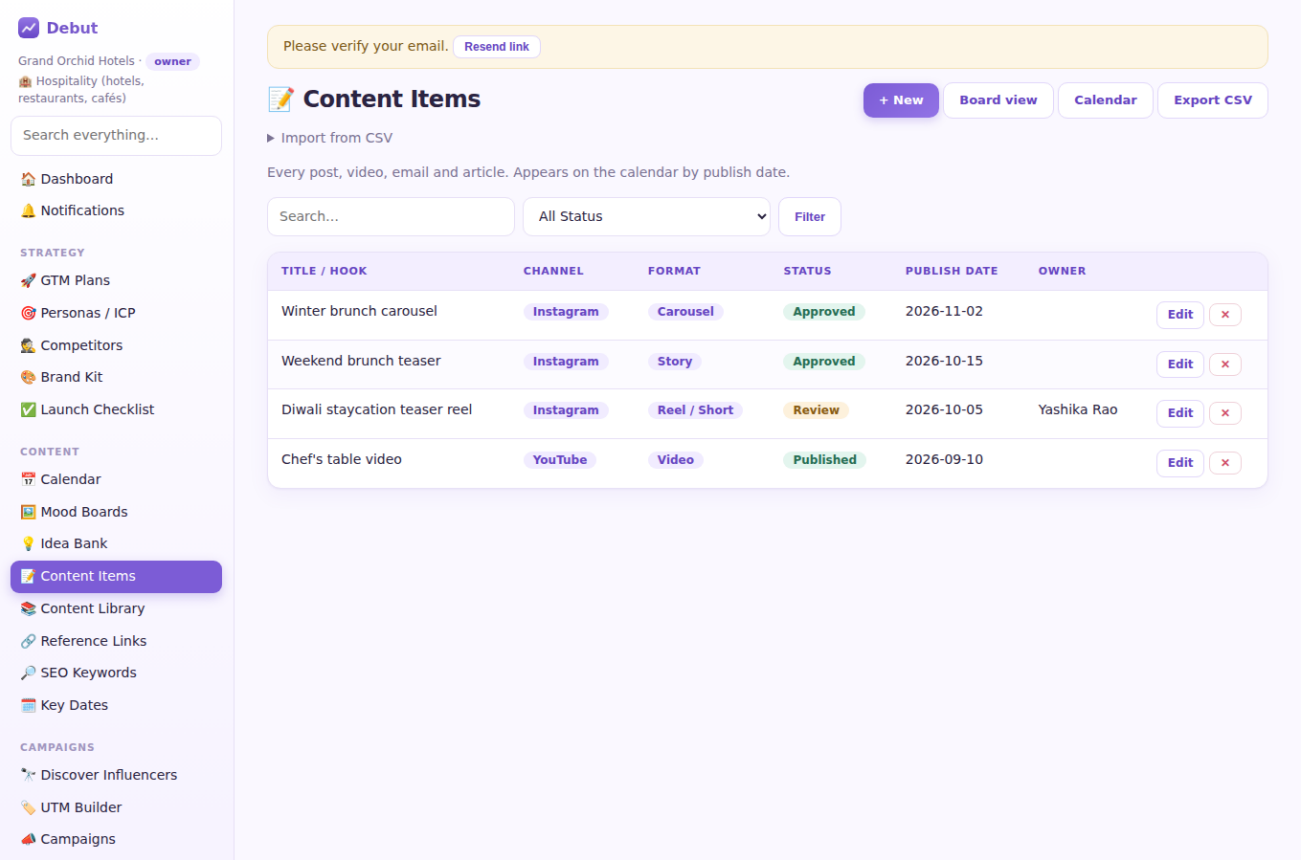

The dashboard: Marketing Command Centre

The industry playbook card, a getting-started checklist, module tiles with live counts, and widgets for publishing, tasks, budget, pipeline, promotions, events and leads.

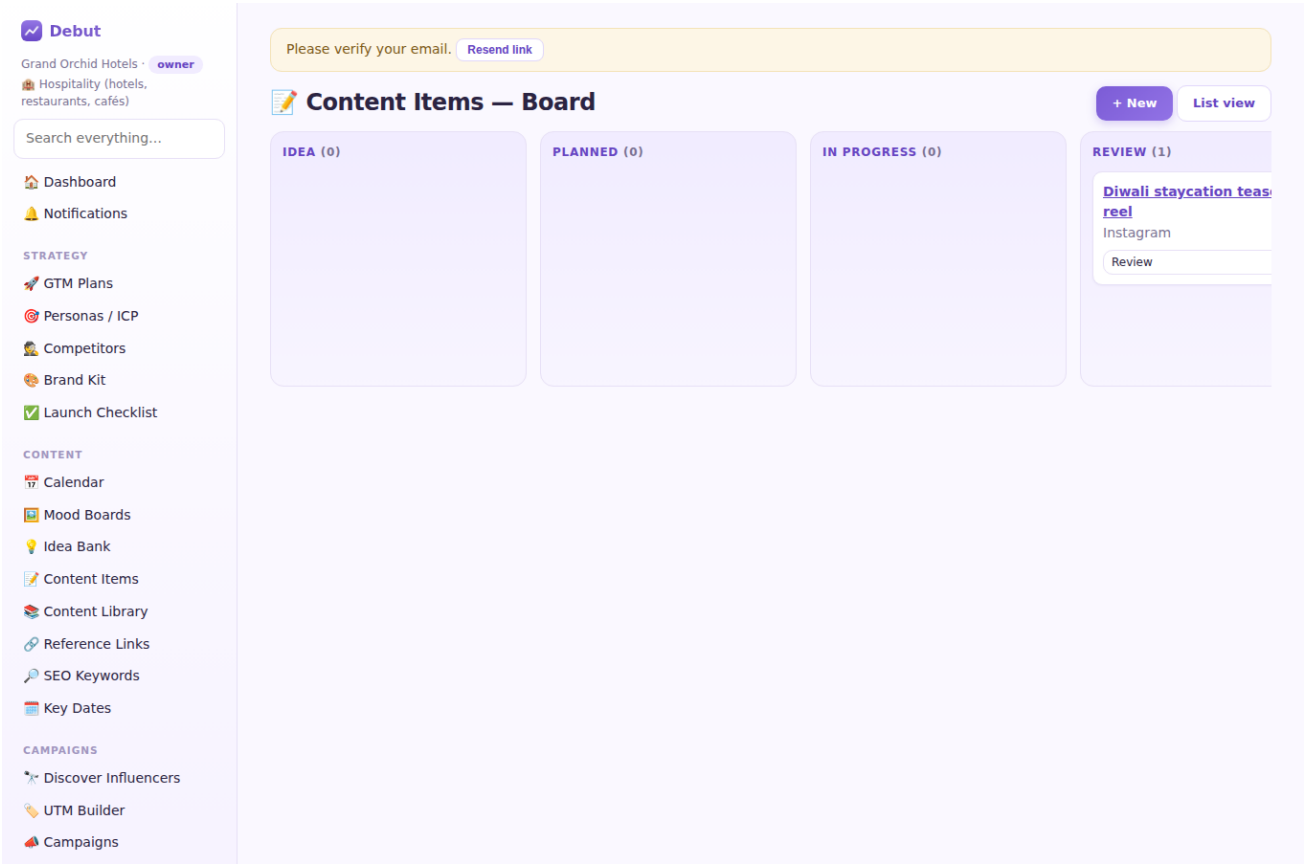

The content calendar

Drag-and-drop scheduling with channel filters, key dates, promotions and events overlaid, and a link to subscribe from Google, Apple or Outlook Calendar.

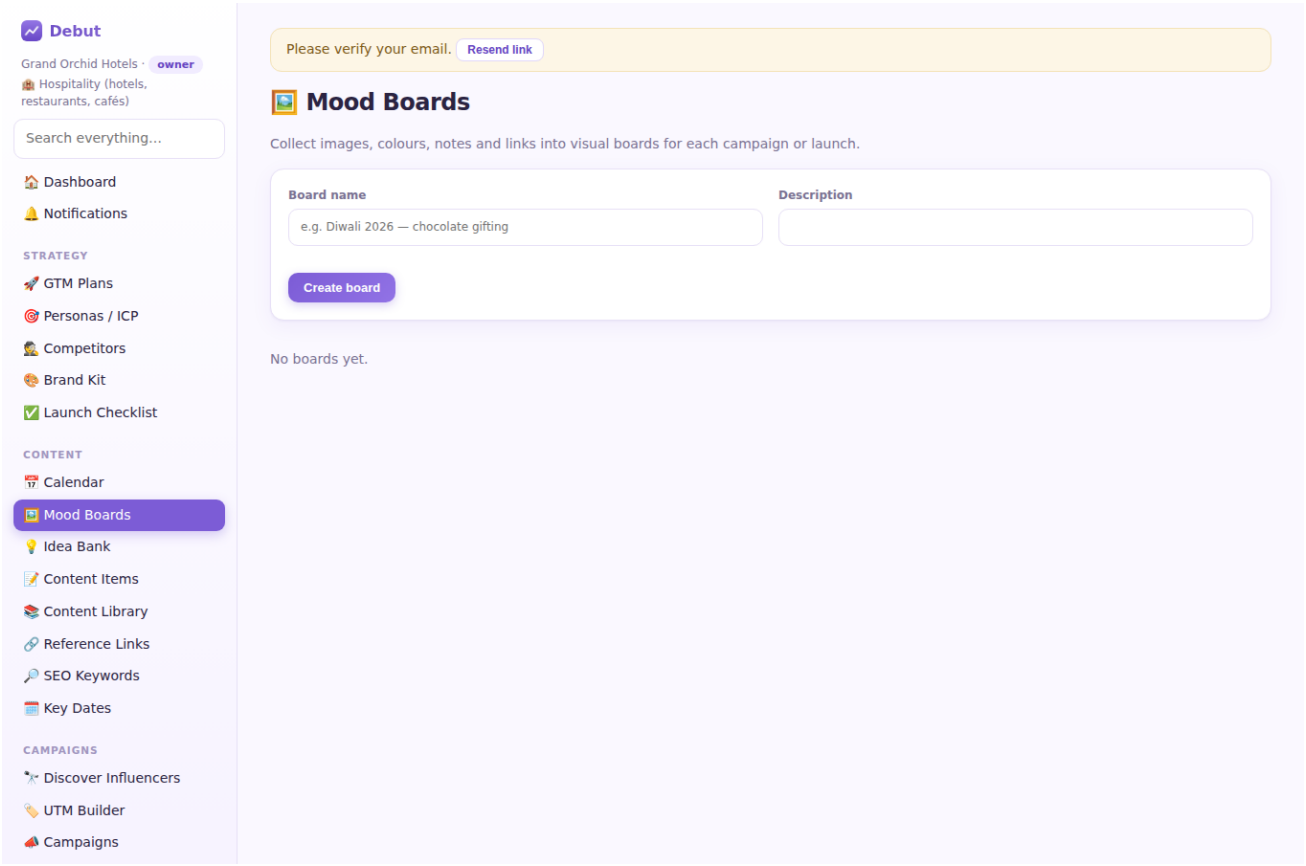

Content Items: the master list

Every post, video and article, filterable by status and searchable, with CSV import and export.

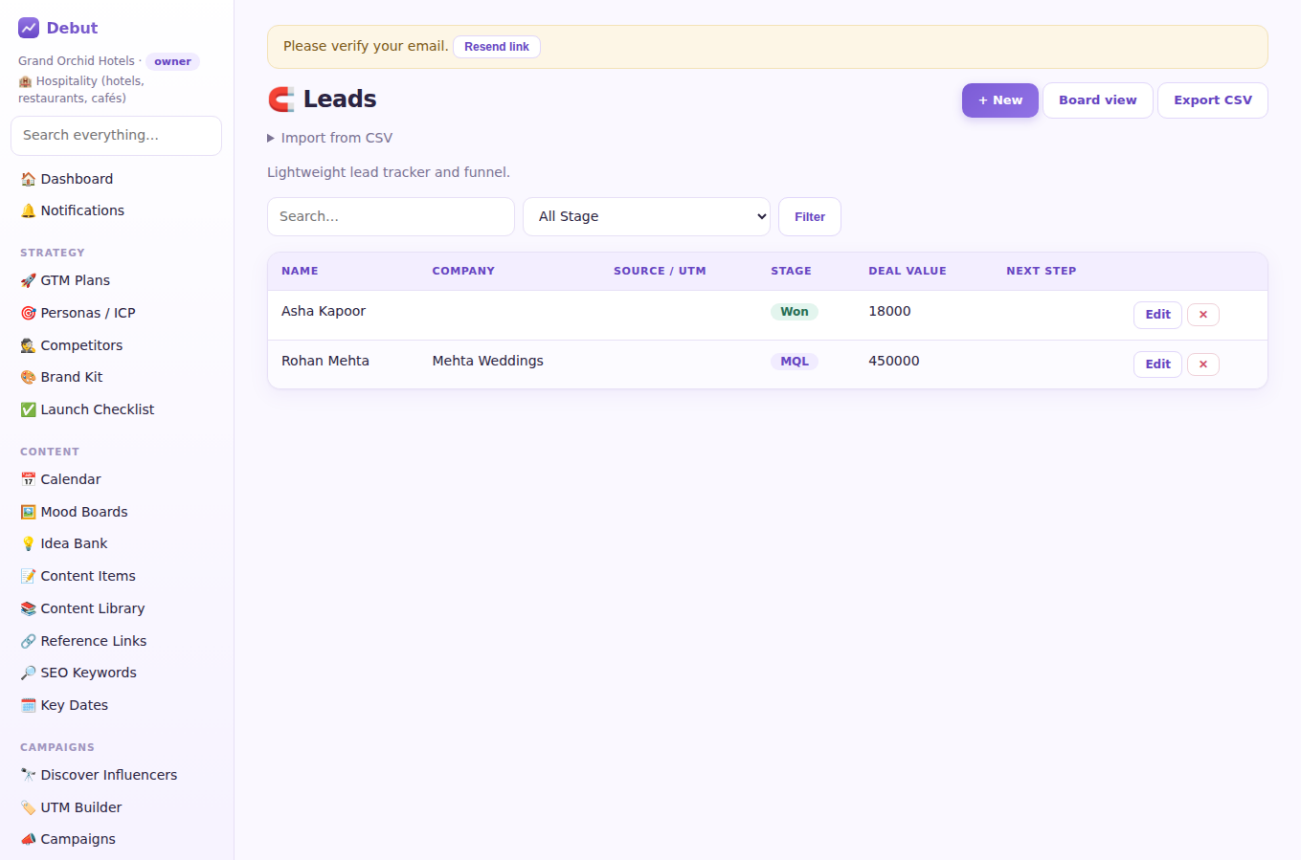

Board view: drag content between statuses

The same list as a kanban board. Most modules (tasks, leads, content orders and more) offer this view.

Mood boards

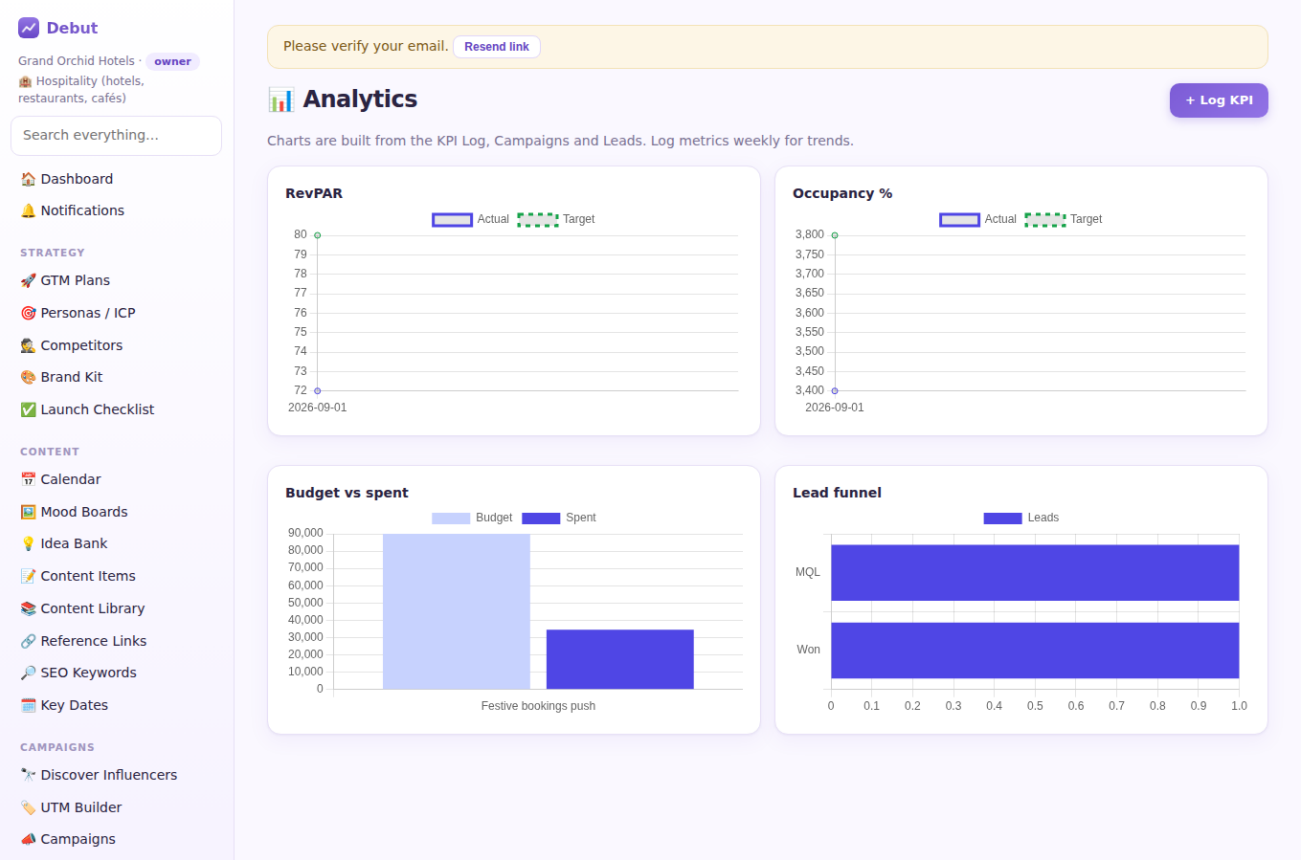

Visual direction for a launch: images, colours, notes and links, gathered in one board.

Leads

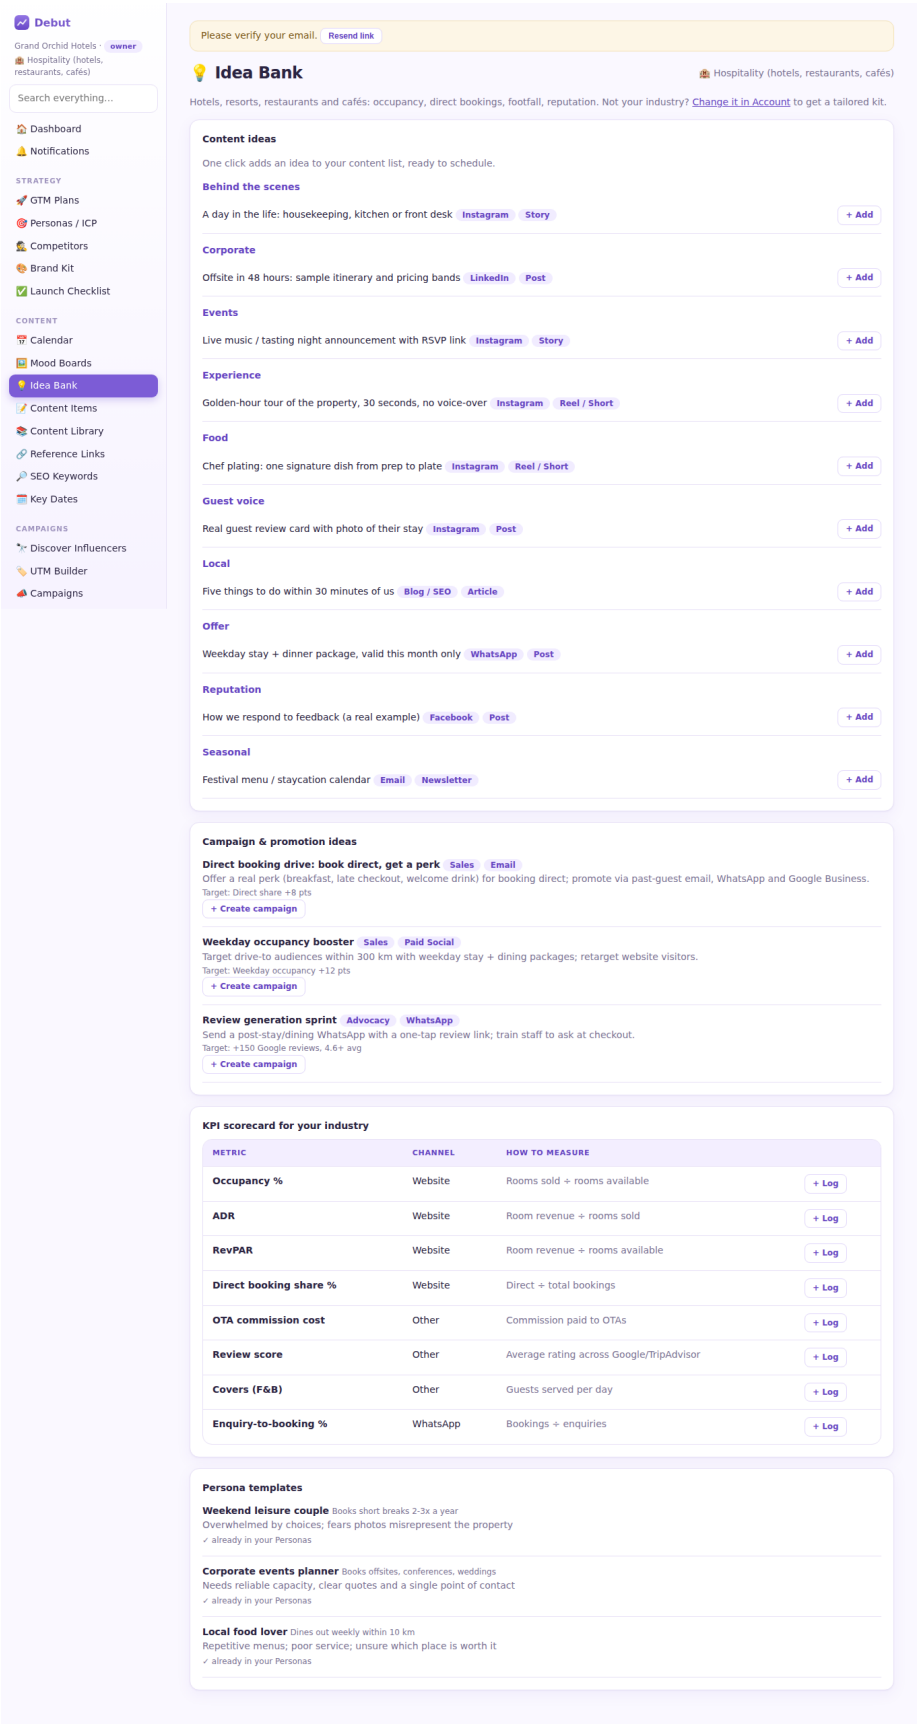

A simple pipeline from New through to Won or Lost, fed by the hosted enquiry form, a website webhook, or entered by hand.

3. Analytics, ideas and live market data

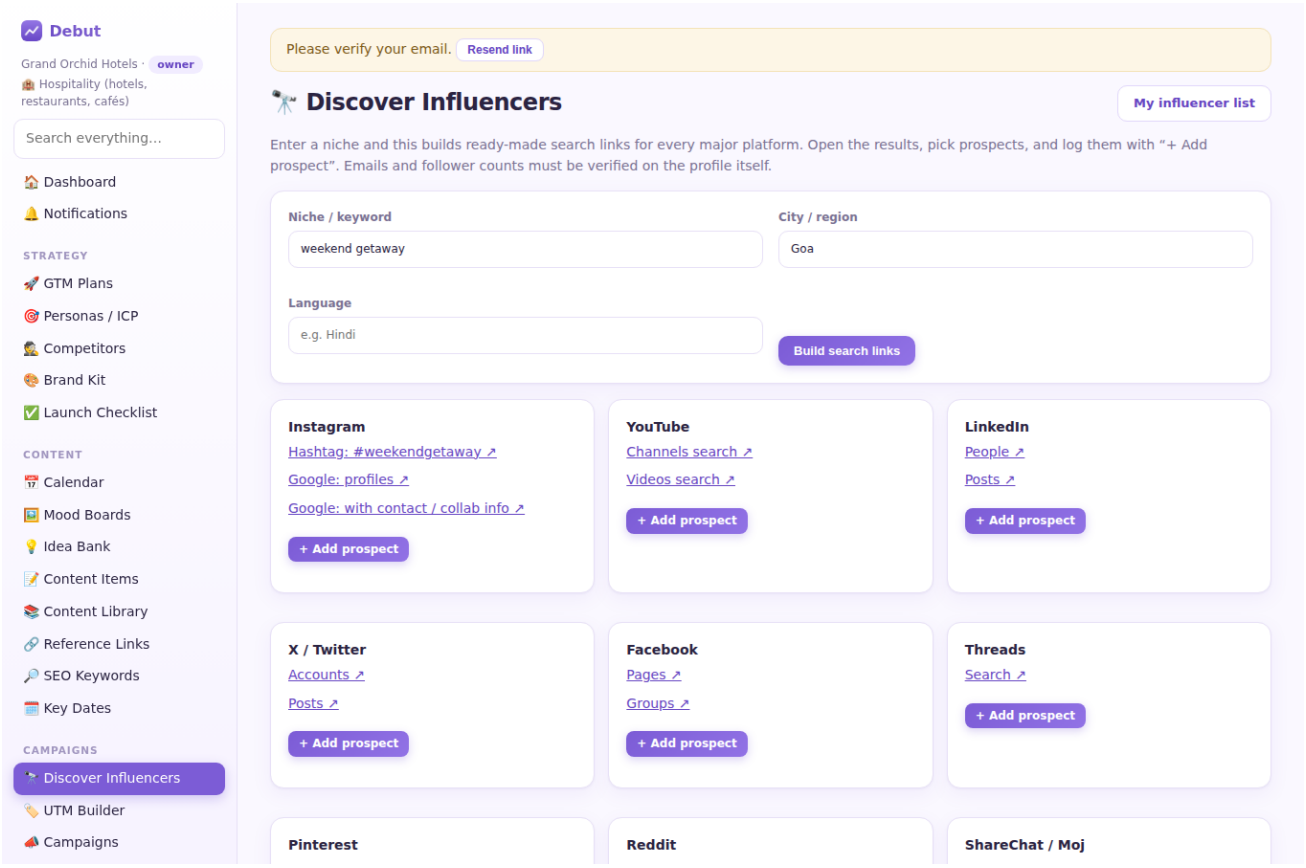

Analytics

KPI trend charts against targets, campaign budget vs spend, and the lead funnel, drawn from what your team logs.

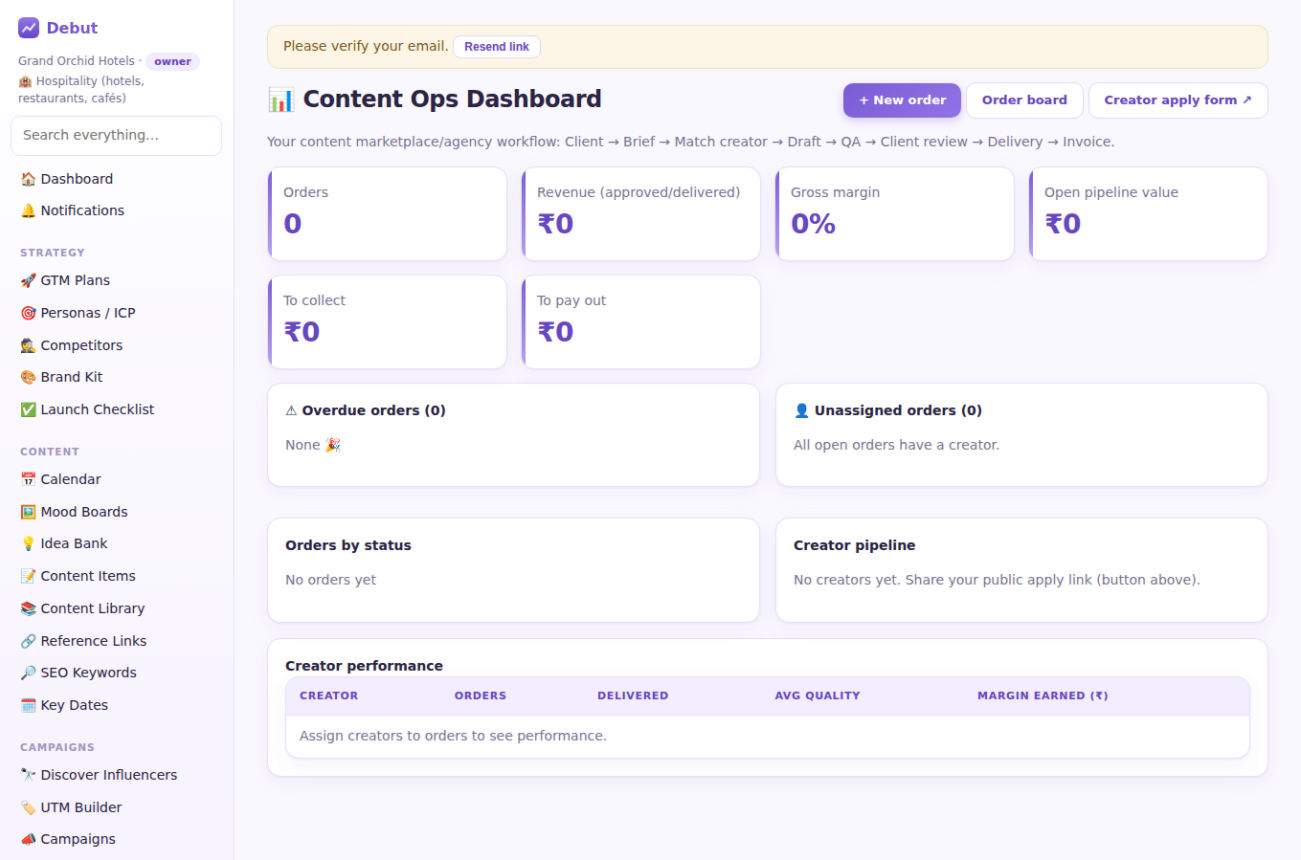

The Idea Bank

Content ideas, campaign ideas and a KPI scorecard, tailored to the workspace's industry (here: Hospitality), each addable in one click.

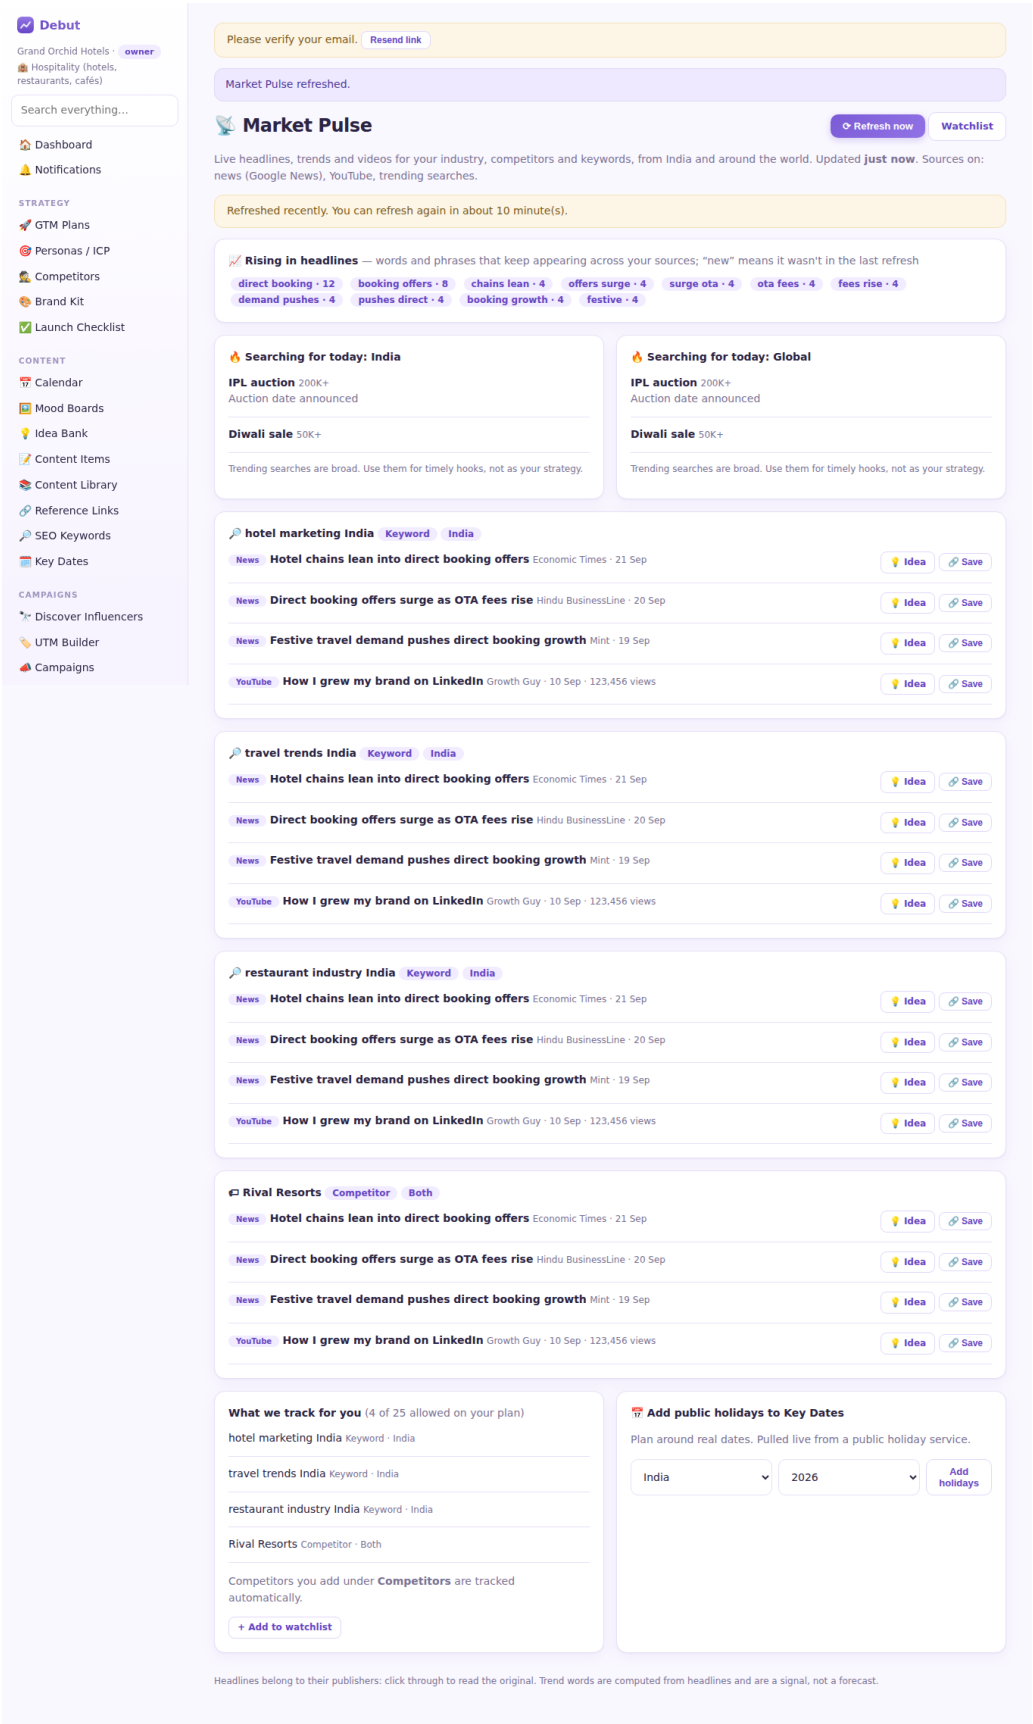

Discover Influencers

Builds ready-made search links across Instagram, YouTube, LinkedIn, X and more for a keyword, city or language. Debut never scrapes real profiles.

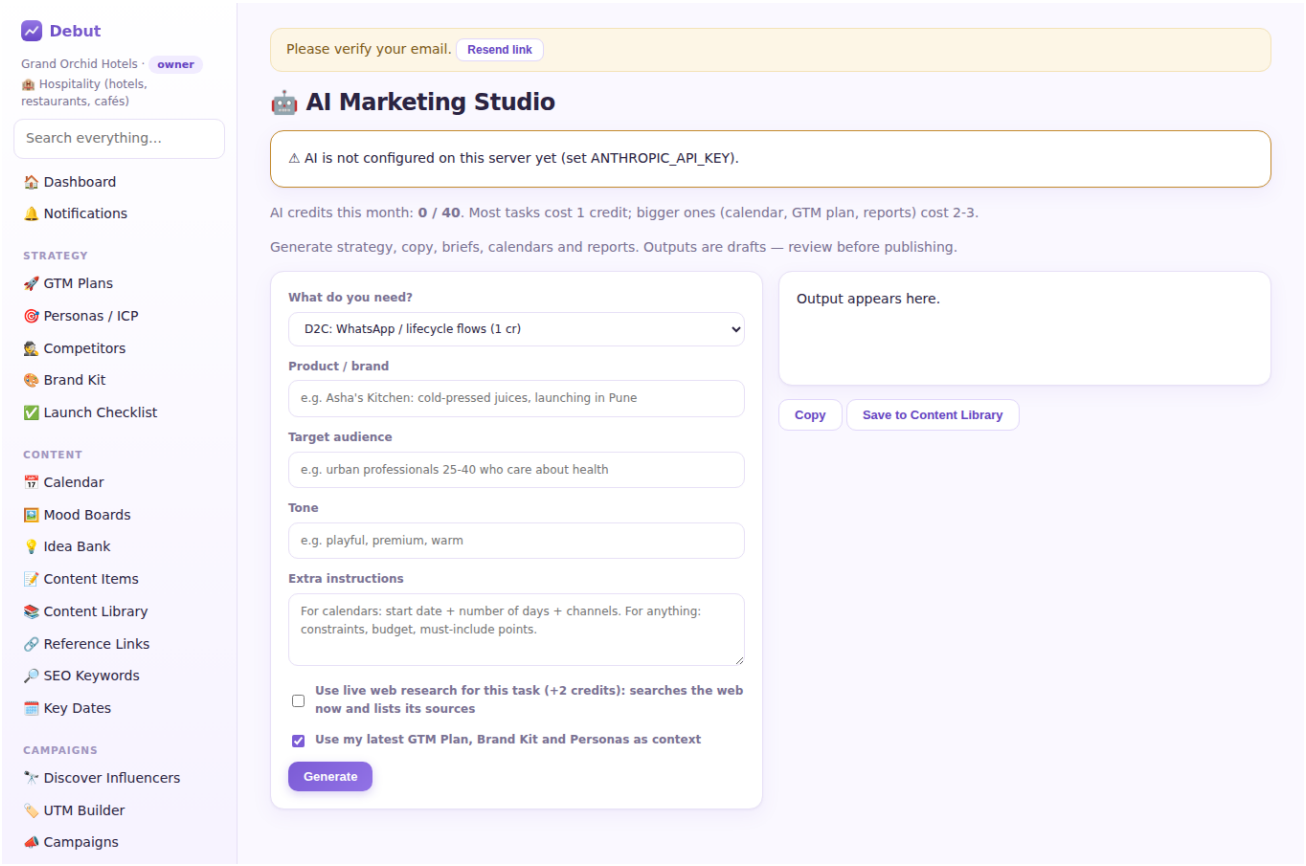

Content Ops: the agency dashboard

Revenue, margin, pipeline value, unassigned orders, a creator leaderboard, and money in and out, all in one screen.

Market Pulse: live signals for this industry

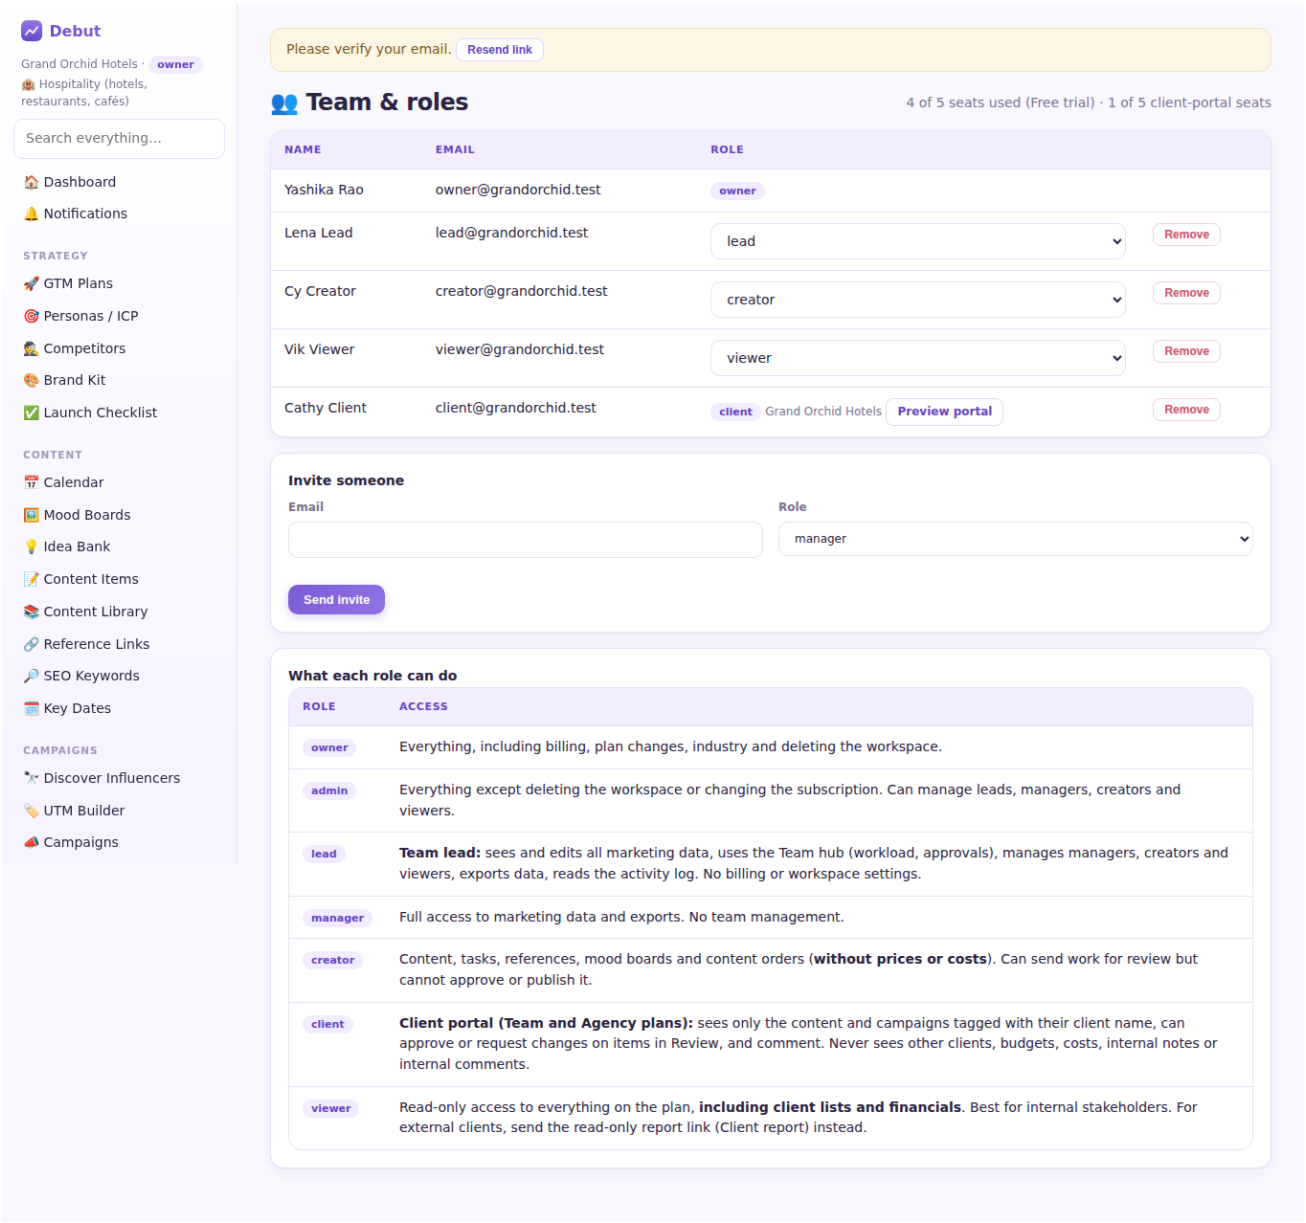

Live headlines from India and worldwide, today's trending searches, rising words across headlines, and the competitors and keywords being tracked. Every card links back to its source.

AI Studio, with live web research

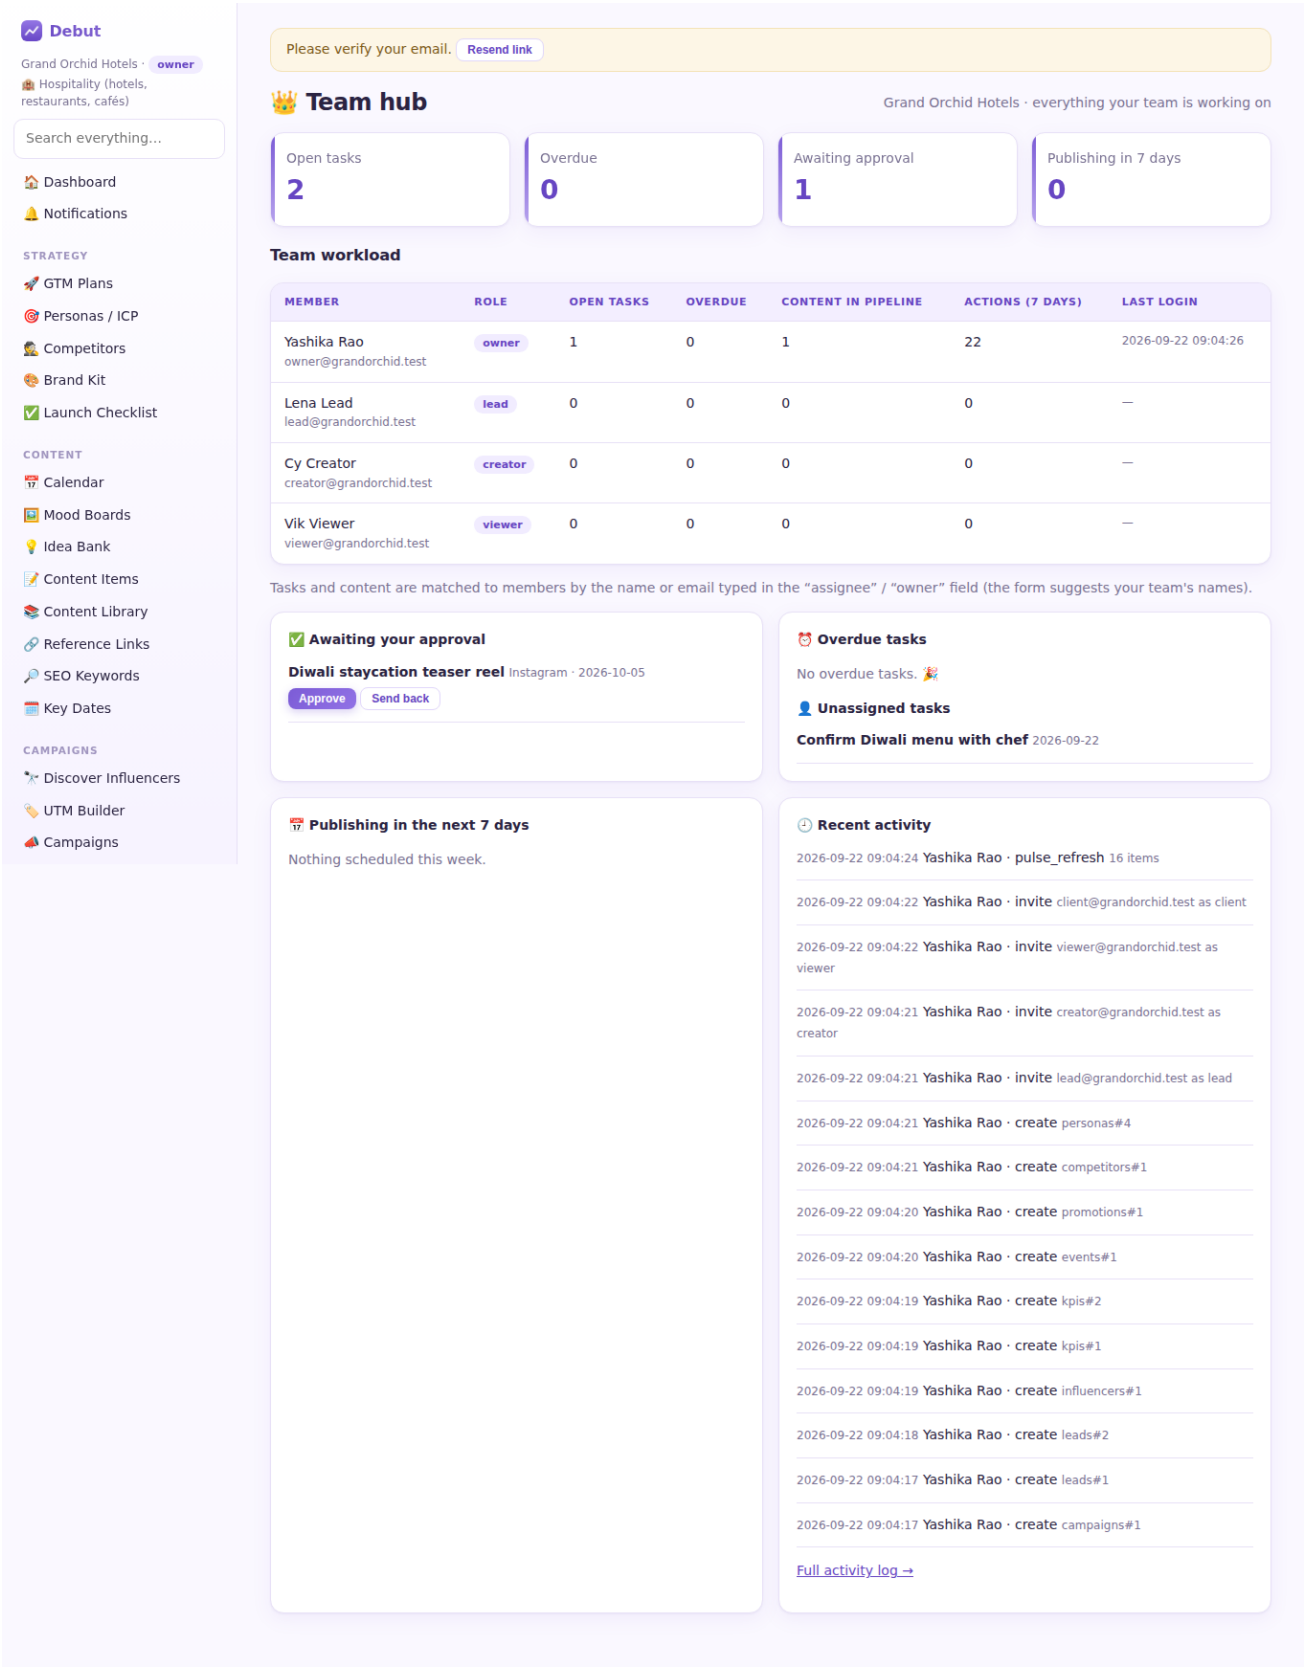

Tasks tailored to the industry appear first, followed by three tasks that always research the live web and cite their sources, then general marketing tasks.

4. Team, client portal, reporting and account

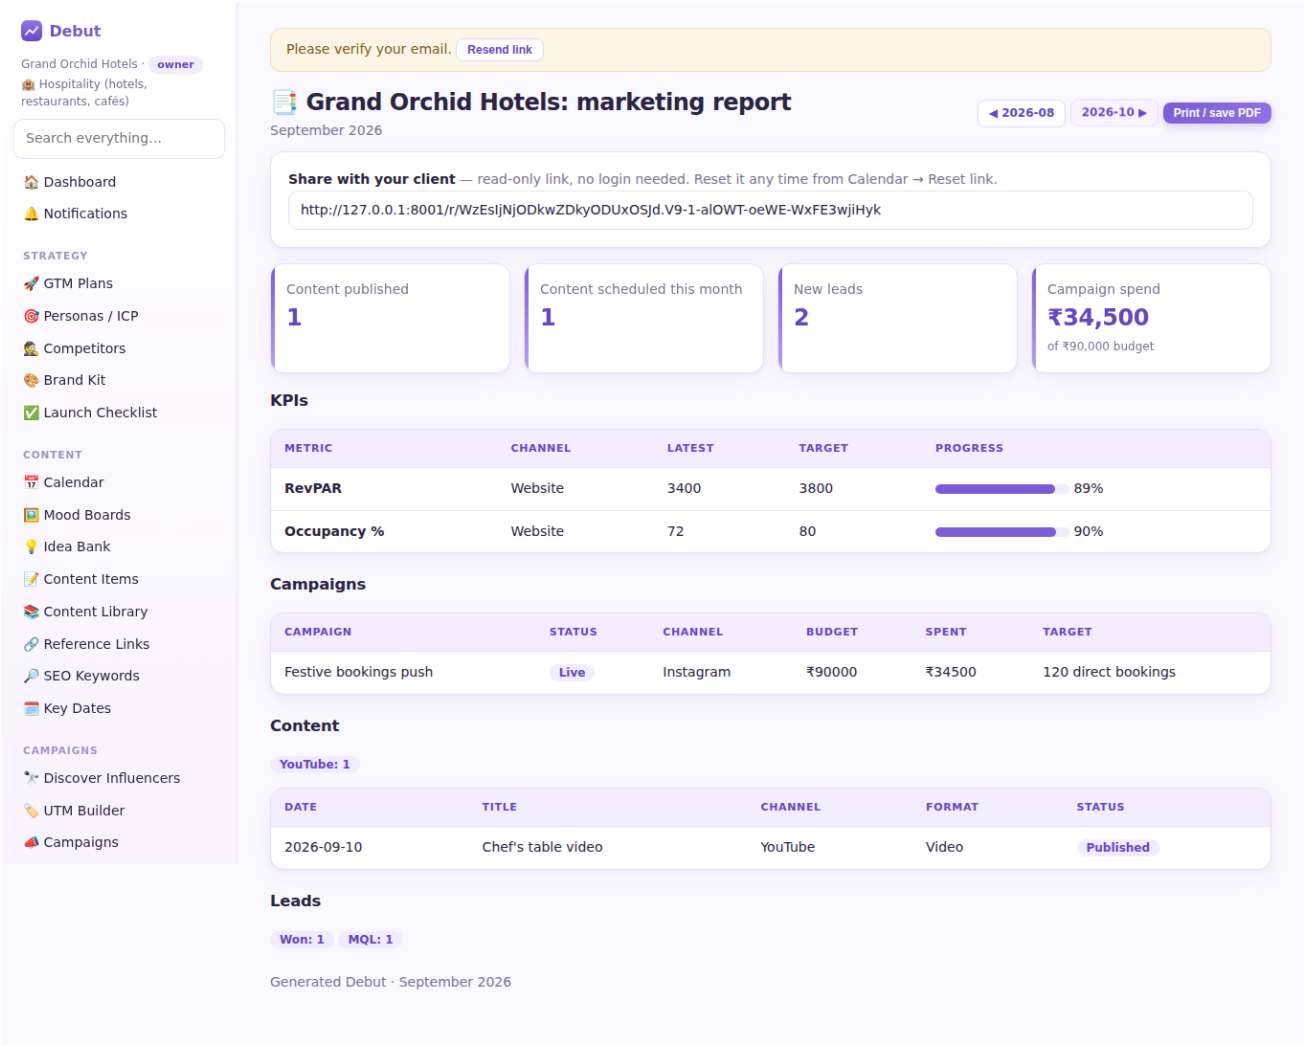

Team & roles

Invite people with the right role. The table beneath explains exactly what each of the six roles can and cannot do.

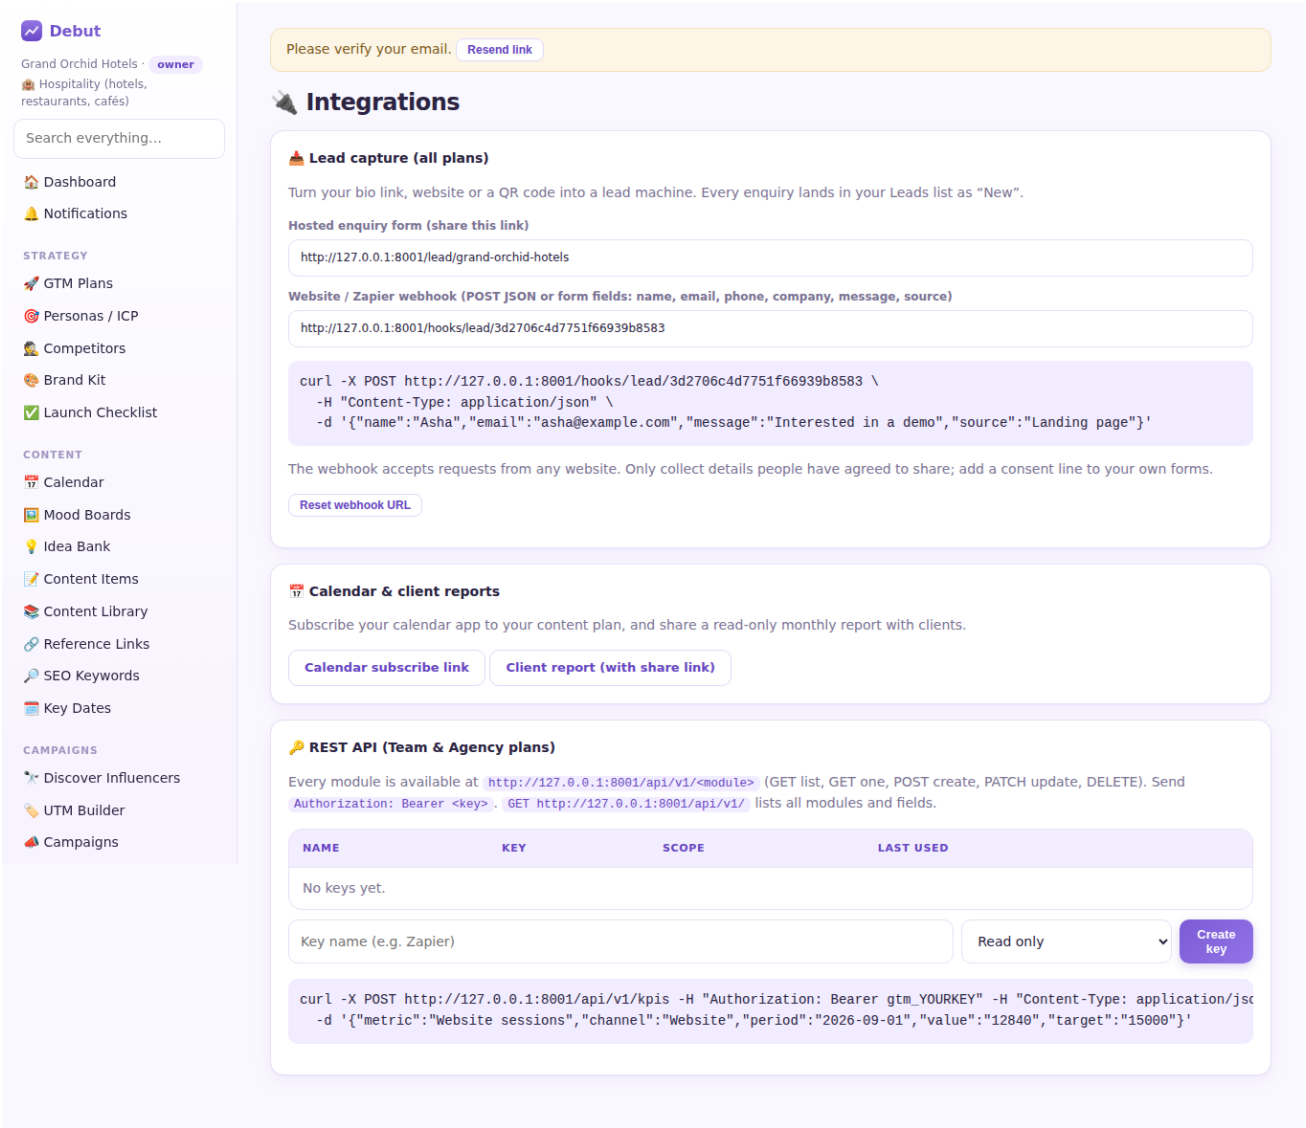

The Team hub: a leader's control room

Workload per person, what needs approval, overdue and unassigned tasks, what publishes this week, and the latest activity, all in one place.

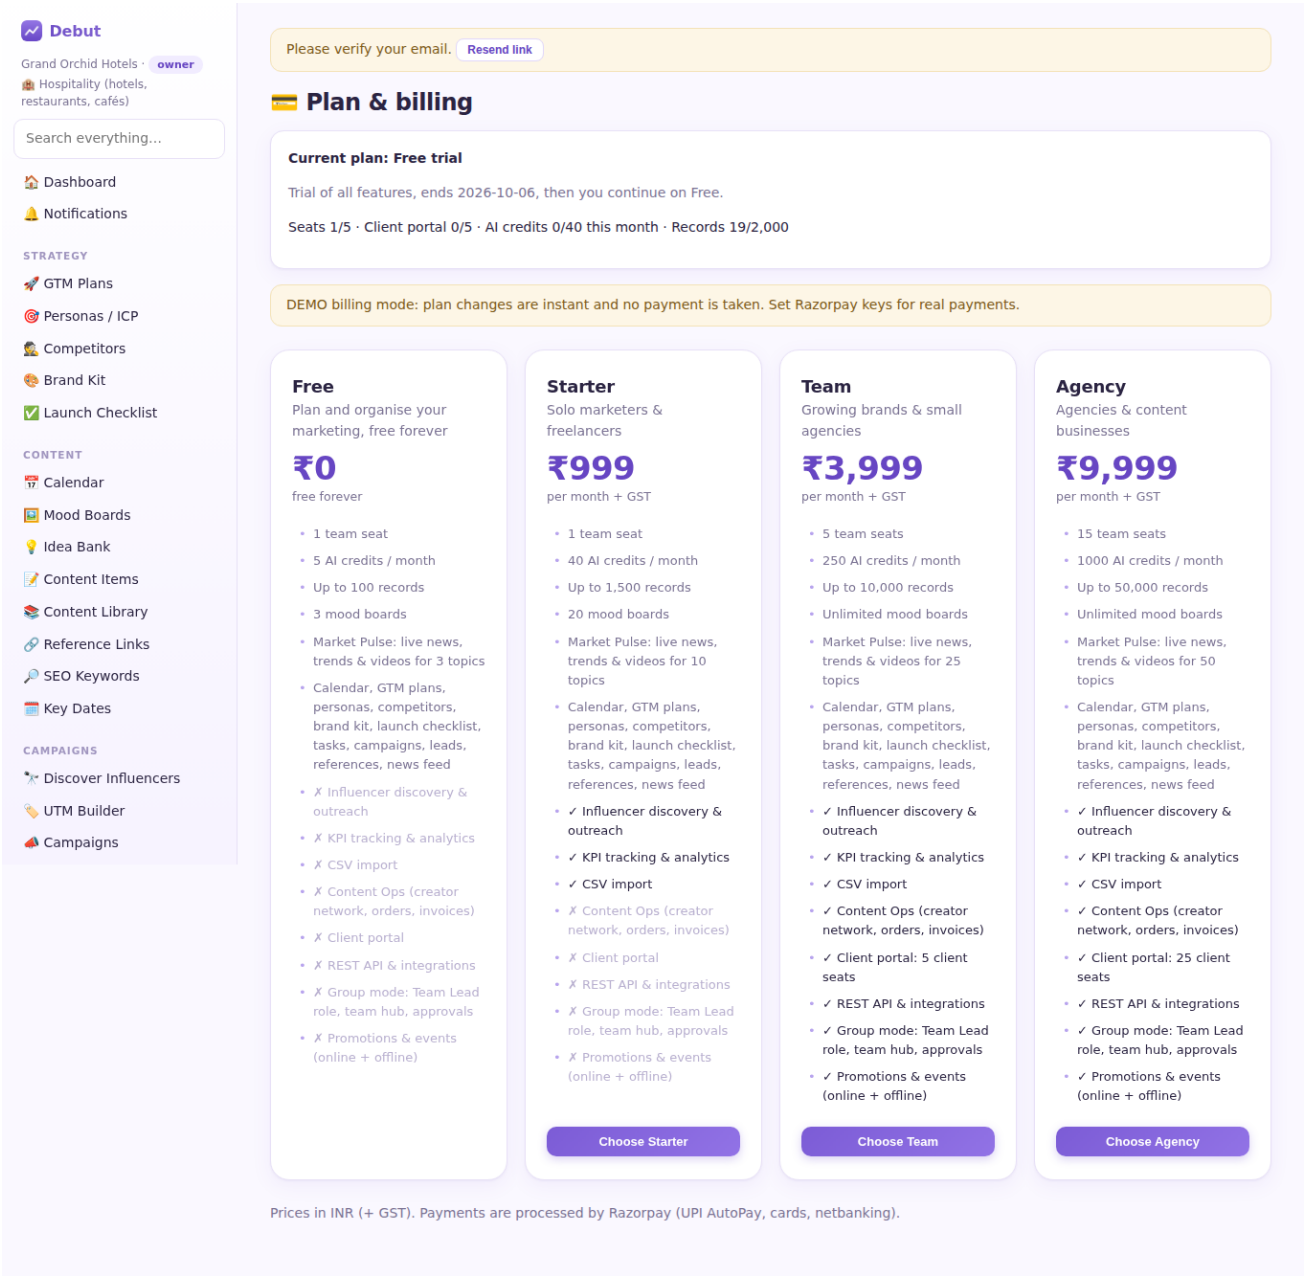

The monthly client report

KPIs against target with progress bars, campaigns, content, leads, promotions and events for the month. Prints cleanly to PDF, or shares as a read-only link.

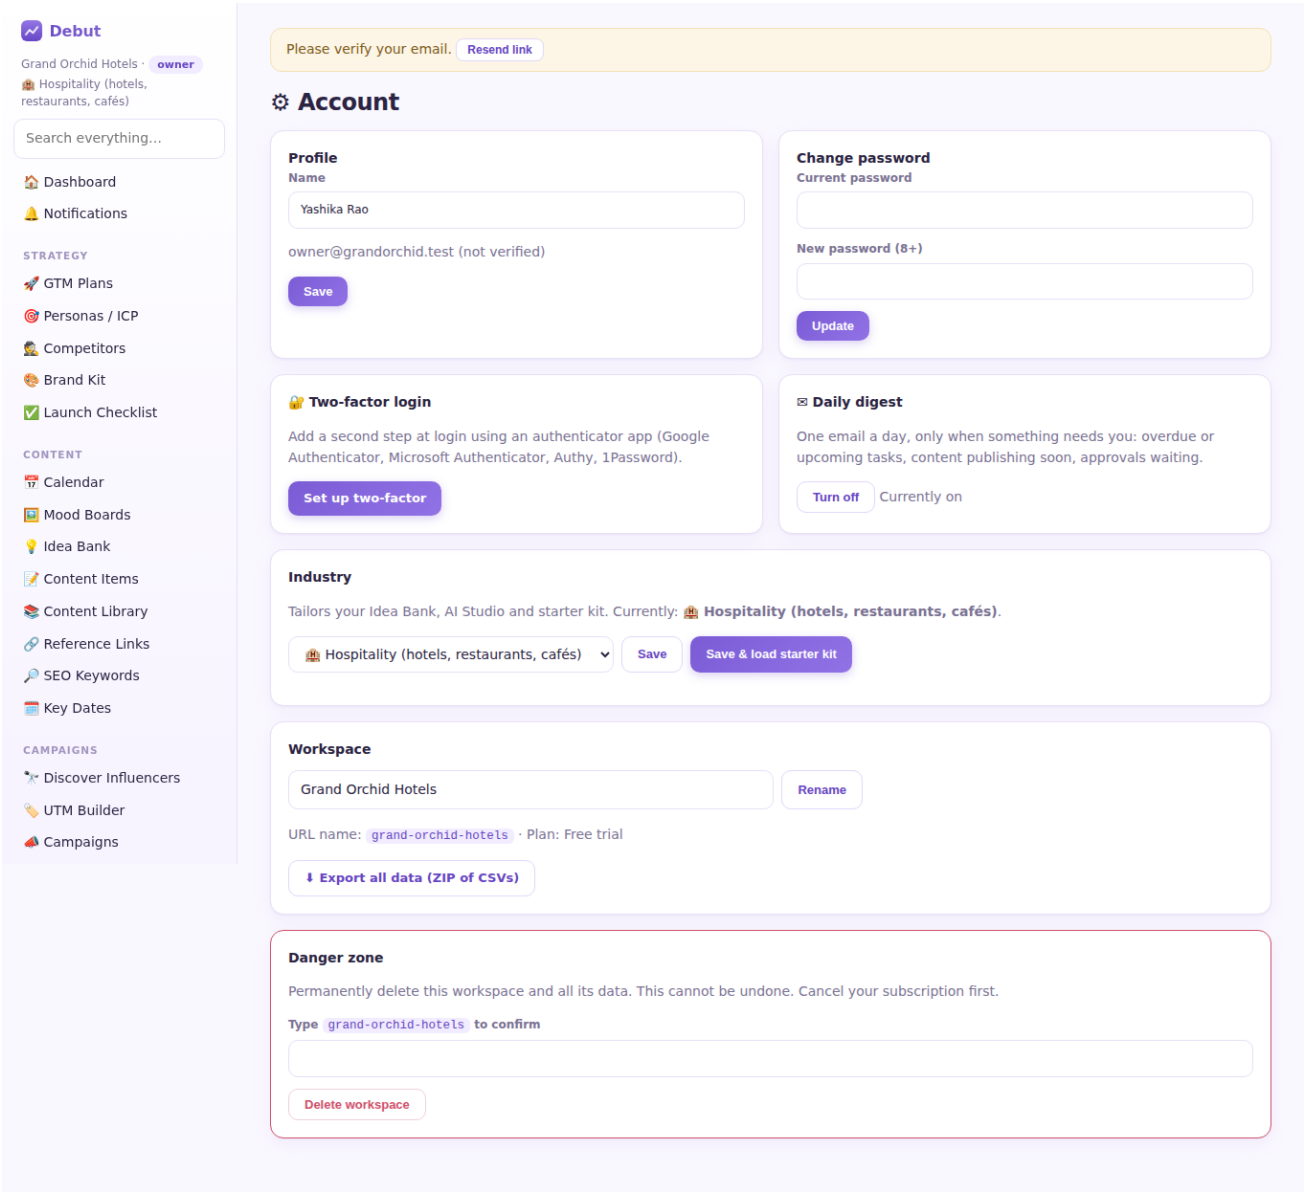

Integrations

A hosted enquiry form and a website webhook on every plan, plus REST API keys with example code on Team and Agency plans.

Plan & billing

The same four plans as the pricing page, now showing this workspace's actual usage against its current plan, with one-click upgrades.

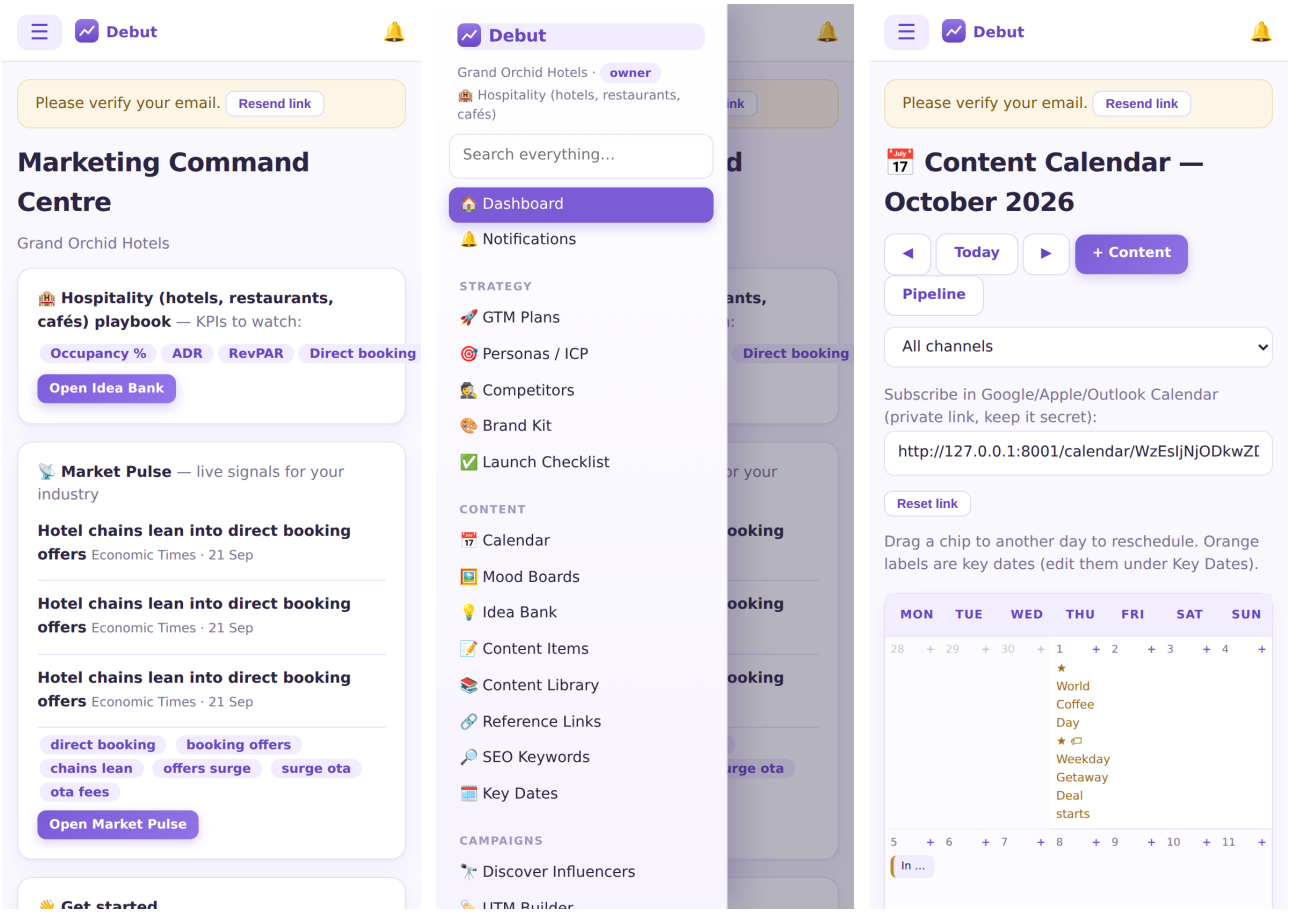

Account: security and workspace settings

Two-factor login, the daily digest, ownership transfer, and the workspace's industry, all in one place.

5. On a phone: the installable app

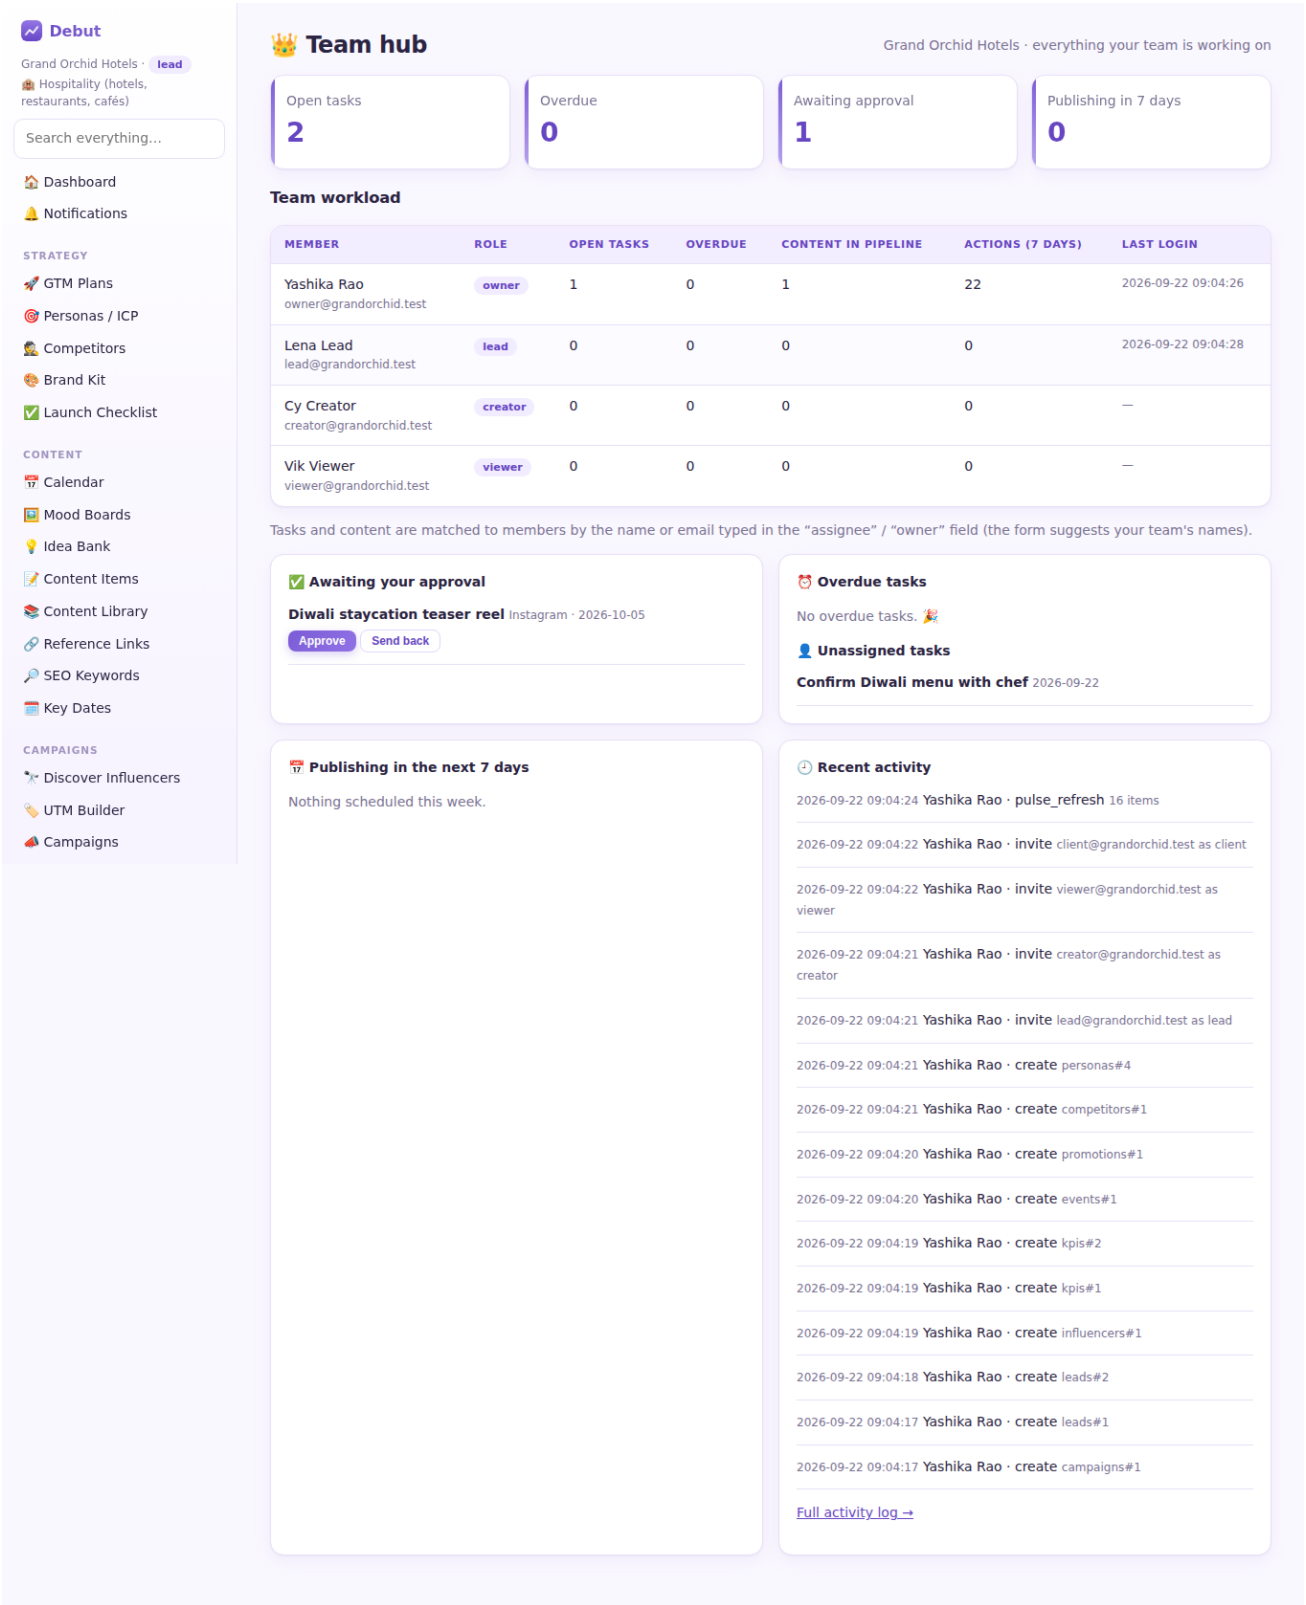

Debut installs like a native app on Android and iPhone (Add to Home Screen). The sidebar becomes a slide-in menu, and a notification bell sits in the top bar.

Dashboard, slide-in menu, and the calendar, all on a phone screen.

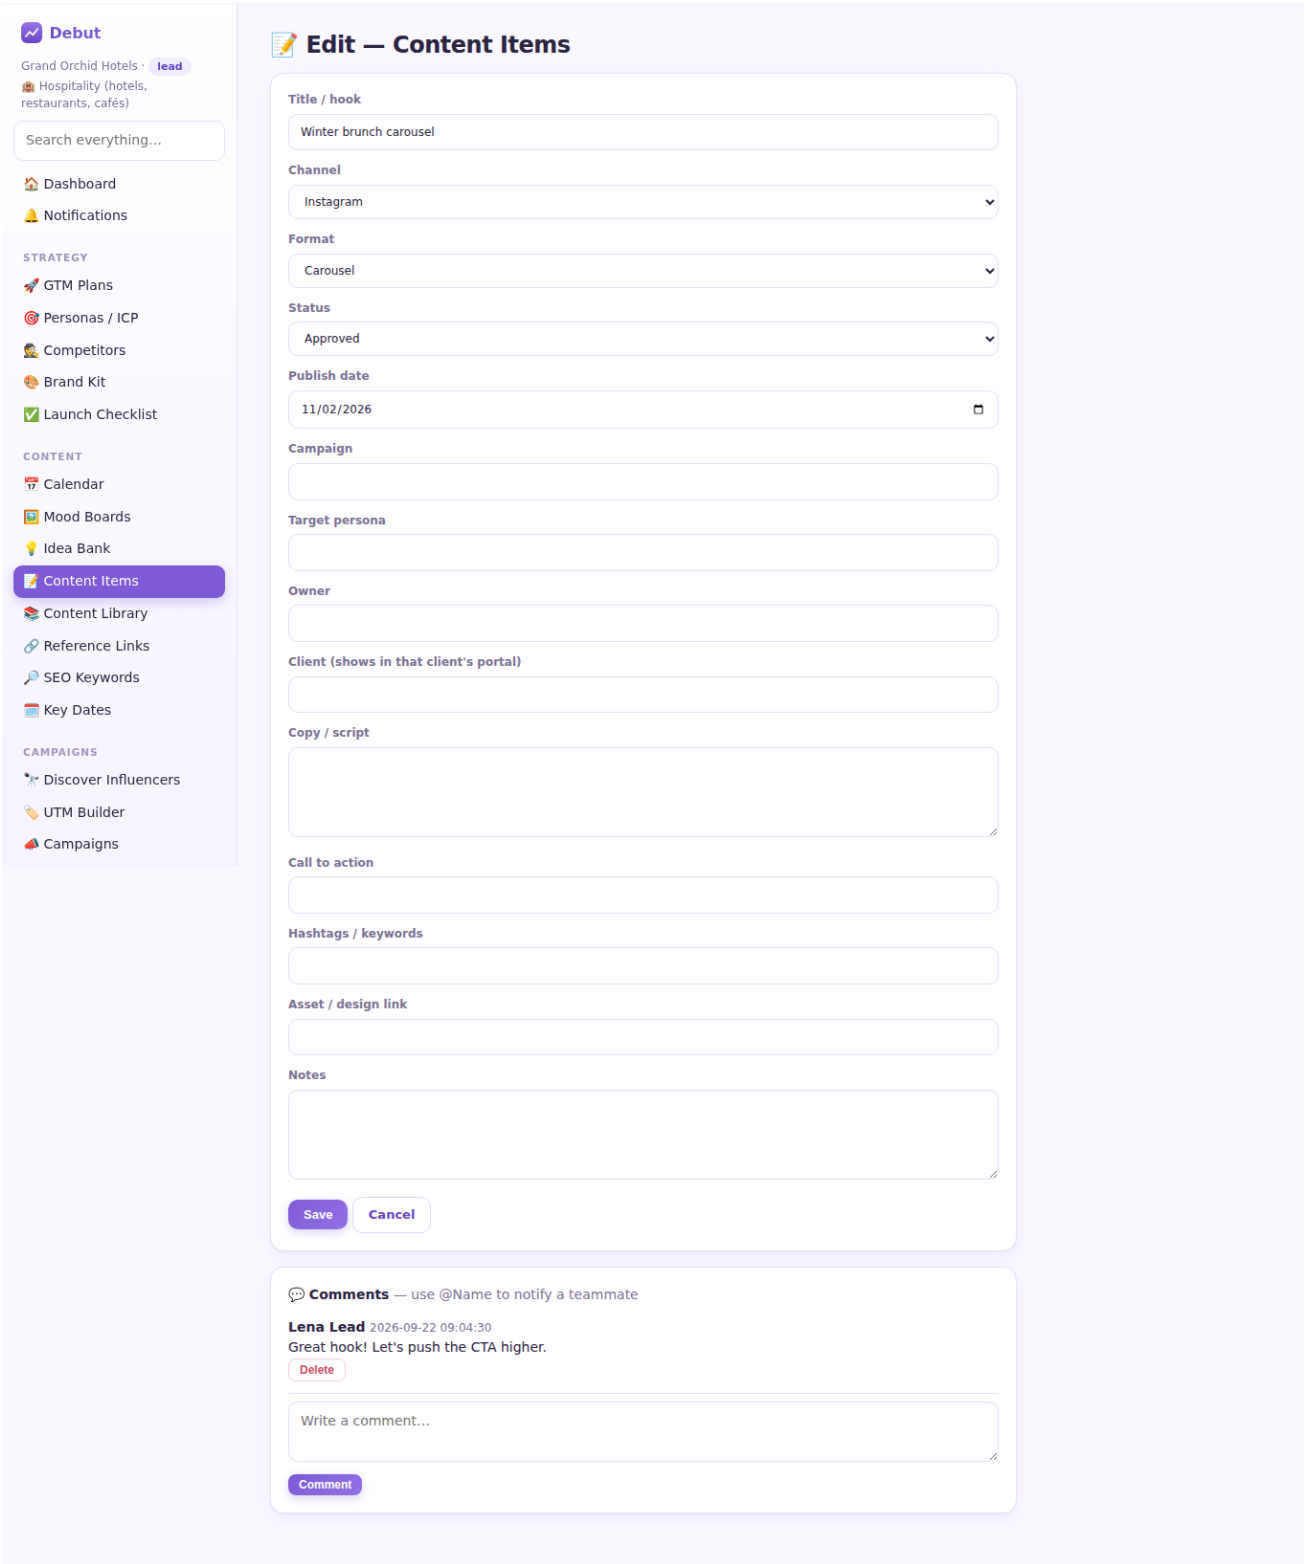

6. What each role actually sees

Debut has six roles. The screens below show the same workspace through a Lead's, a Creator's, a Viewer's and a Client's eyes, so you can see the boundaries for yourself.

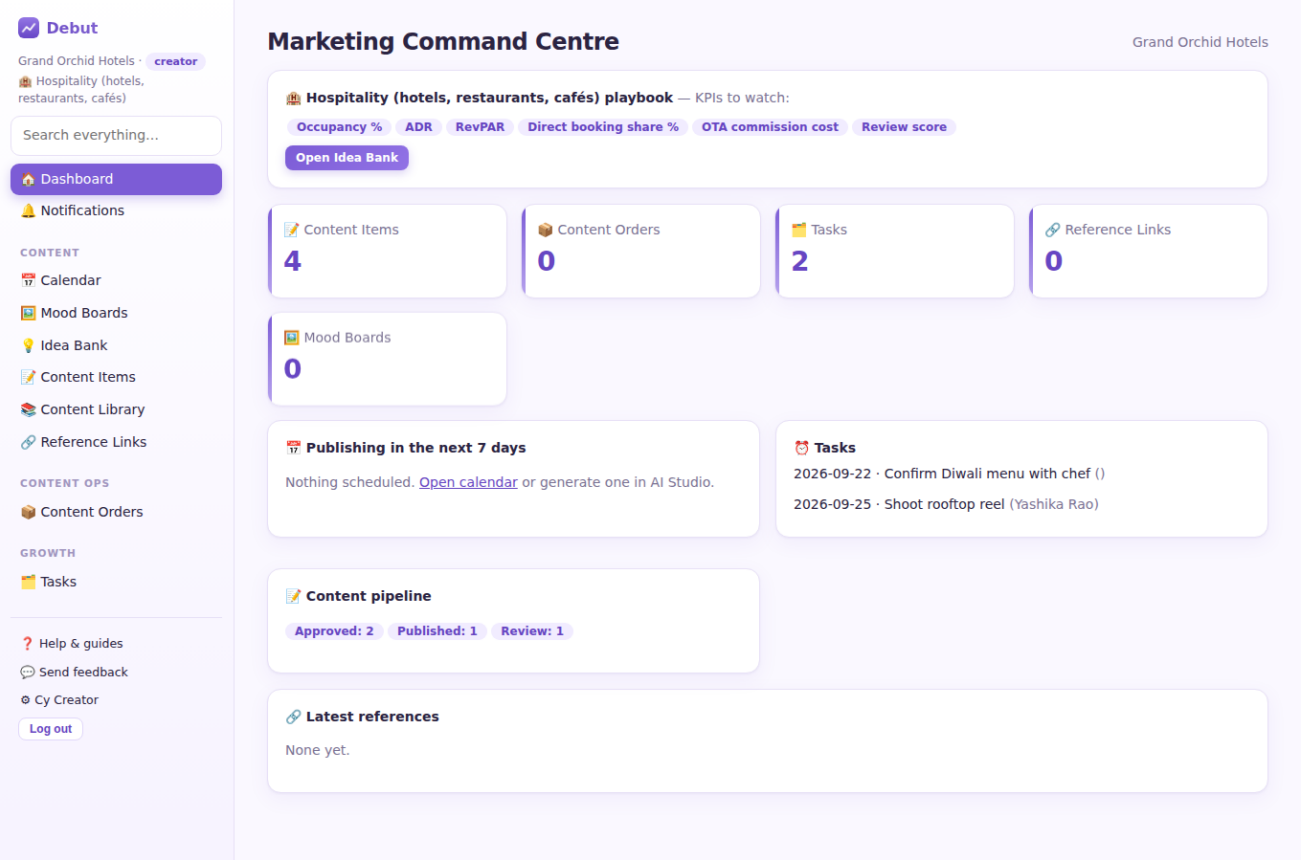

A Team Lead: the Team hub

A lead sees and edits all marketing data, approves work, and runs the Team hub, but has no access to billing or workspace settings.

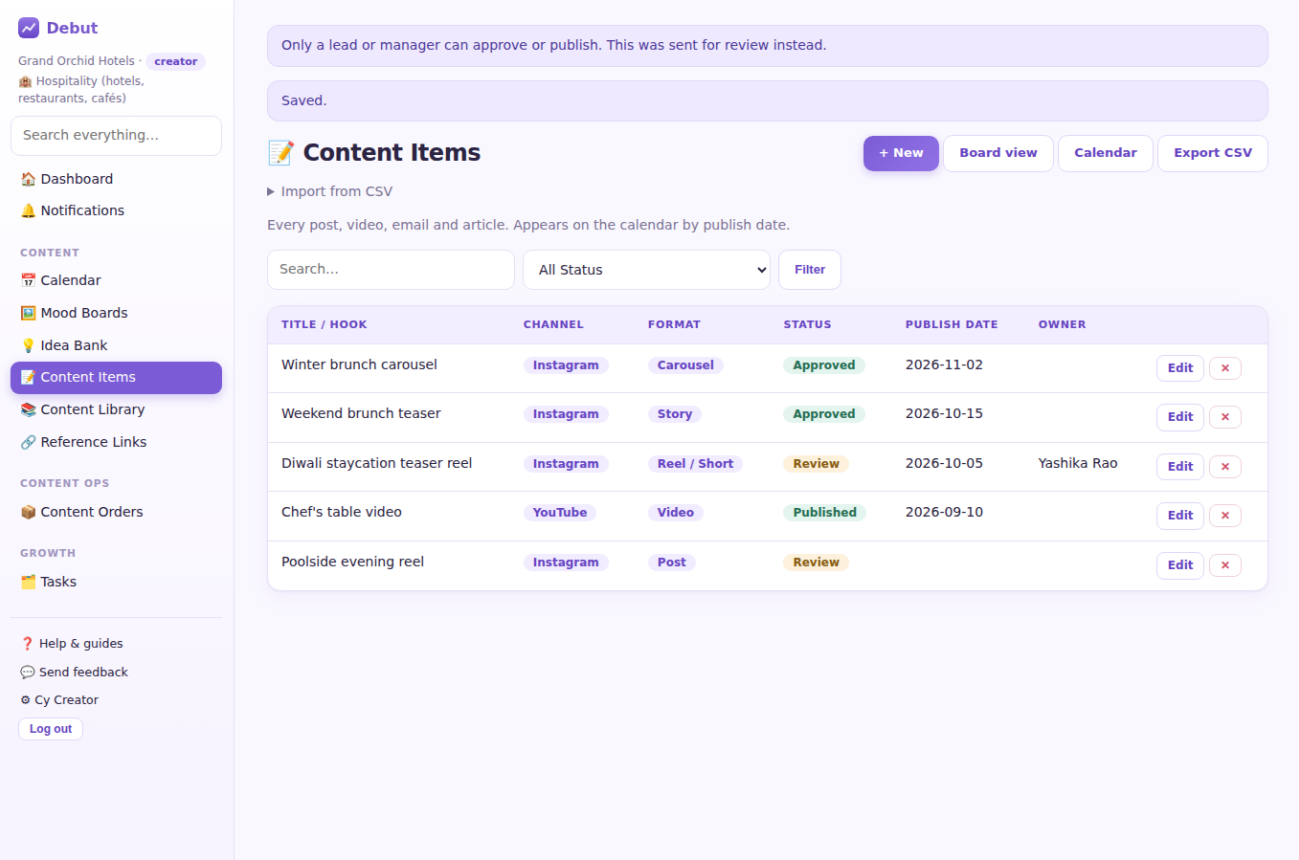

Comments, with @mentions and client-sharing

Any team member can leave a comment; ticking “Share with client” is the only way a comment becomes visible in the client portal.

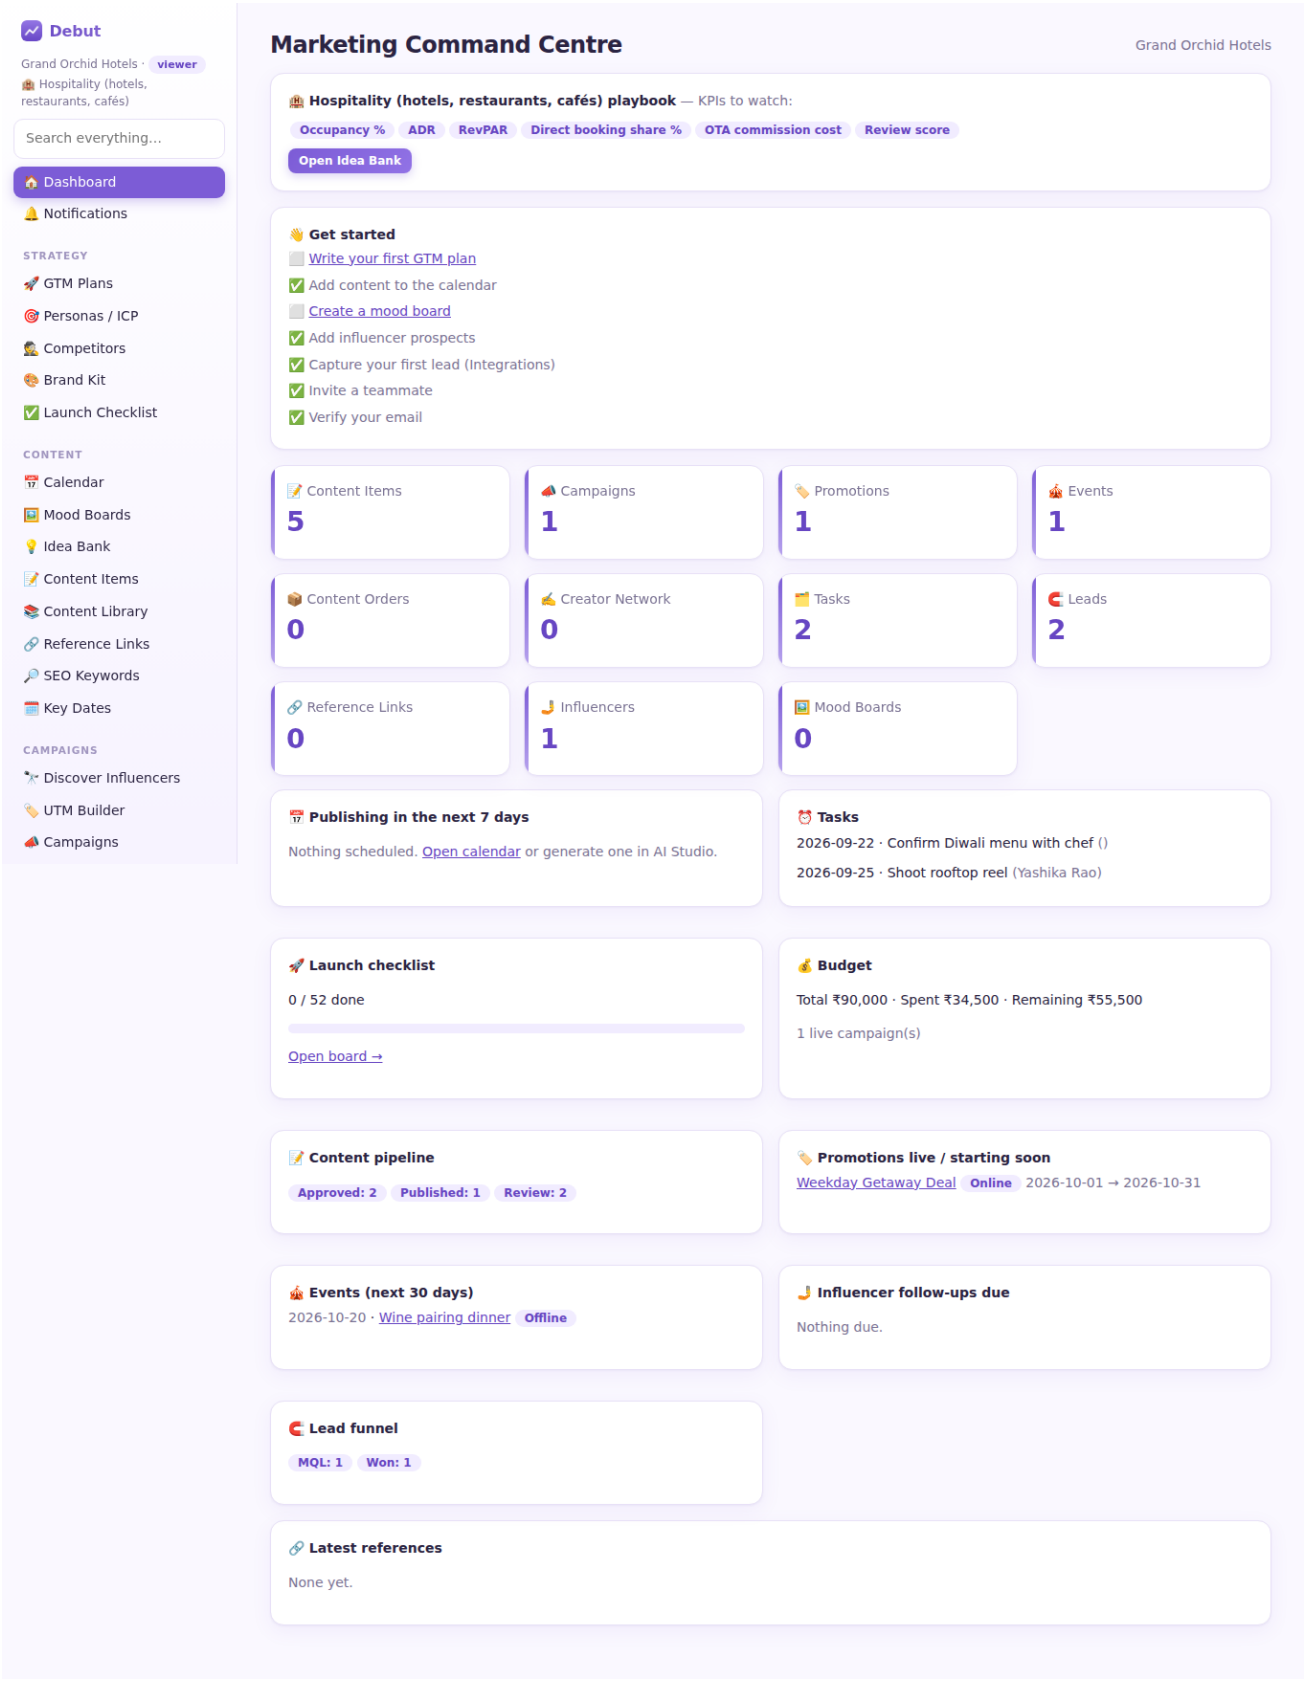

A Creator (freelancer): a narrower dashboard

Creators see content, tasks, references and mood boards, plus content orders with prices and costs hidden. No budgets, no team management, no billing.

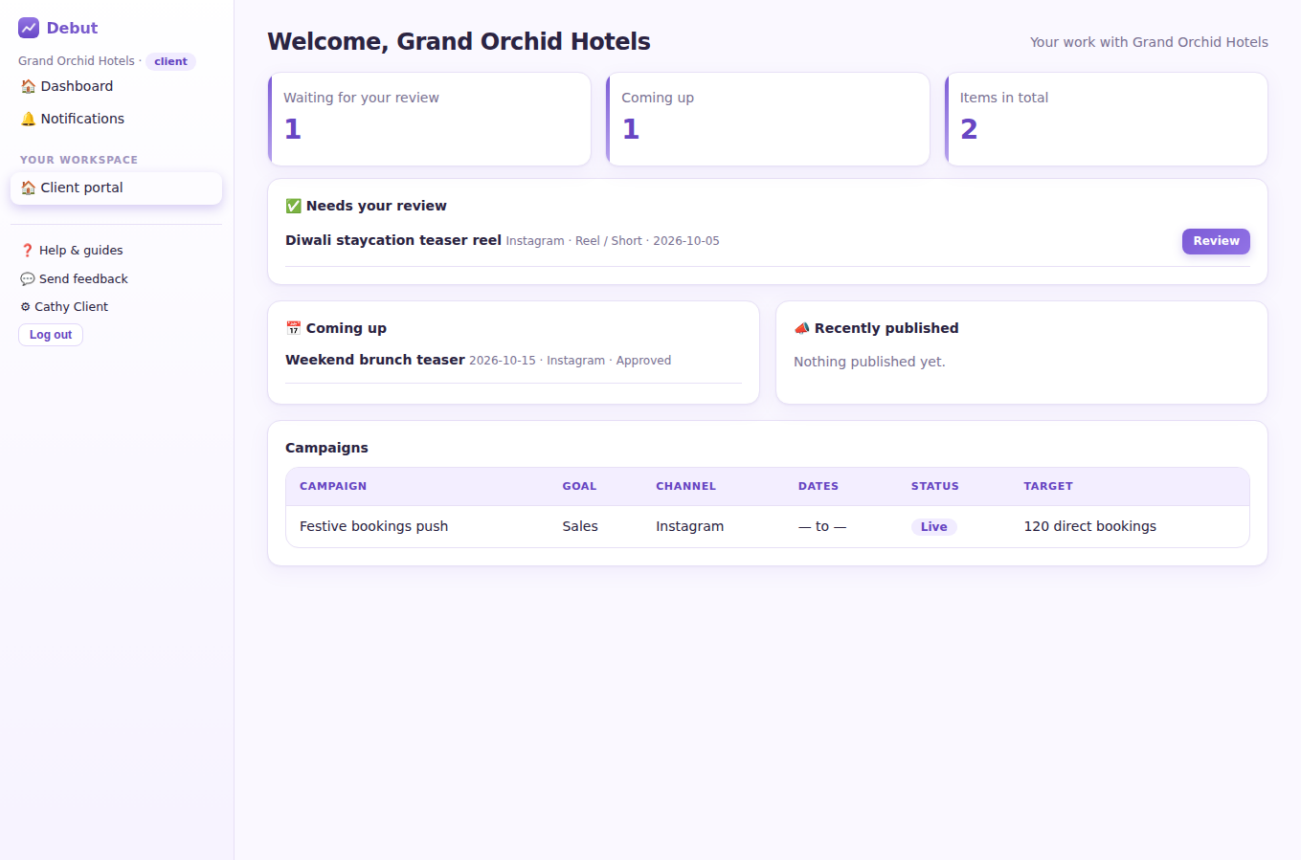

Creators cannot publish their own work

A creator tried to mark an item “Published”. Debut quietly kept it in “Review” and told them a lead or manager must approve it first.

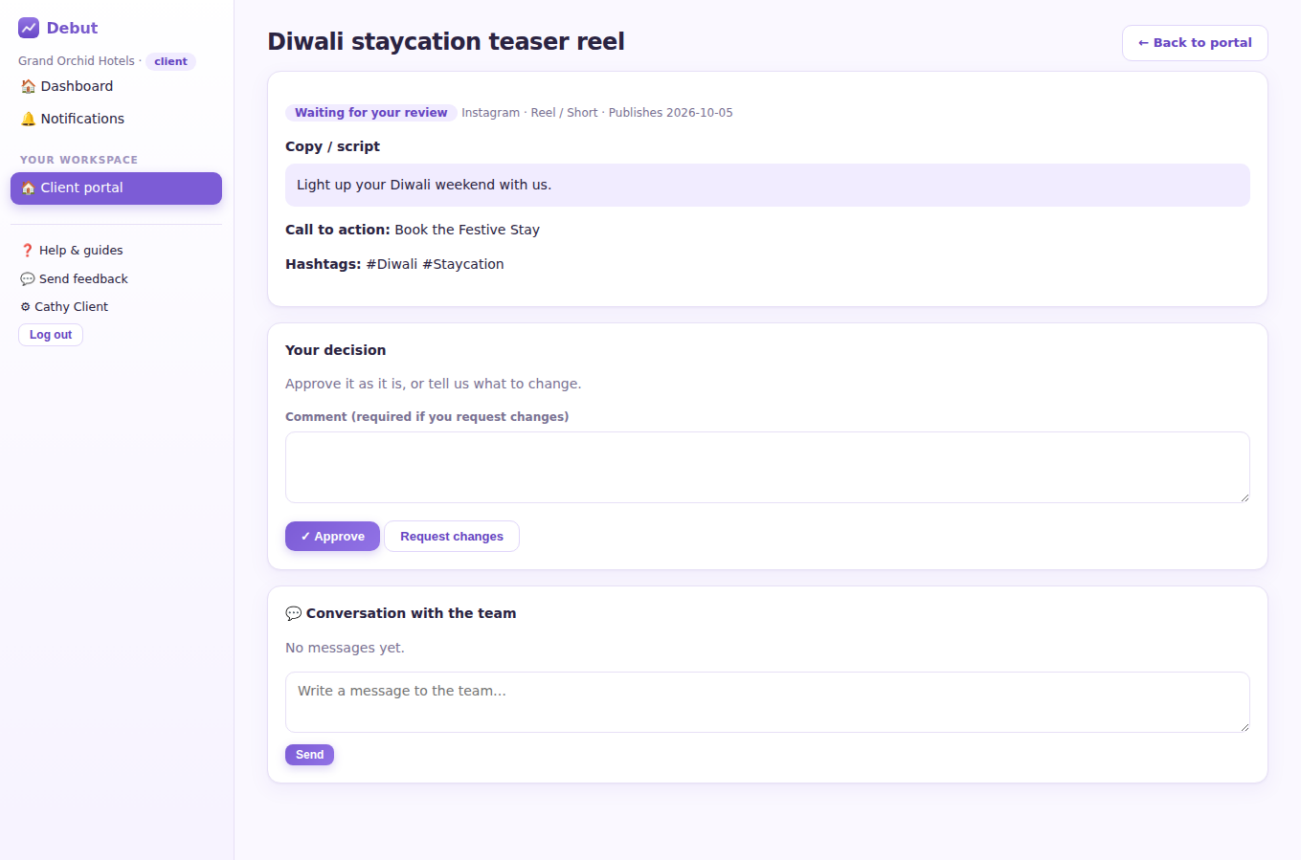

A Viewer: read-only, full visibility

Viewers see everything on the plan, exactly as the owner does, but every action is disabled. Best for internal stakeholders, not outside clients.

A Client: their own portal, and nothing else

A hotel client sees only the content and campaigns tagged with their name: what needs their review, what's coming up, and their campaigns. No other client, no budgets, no internal notes.

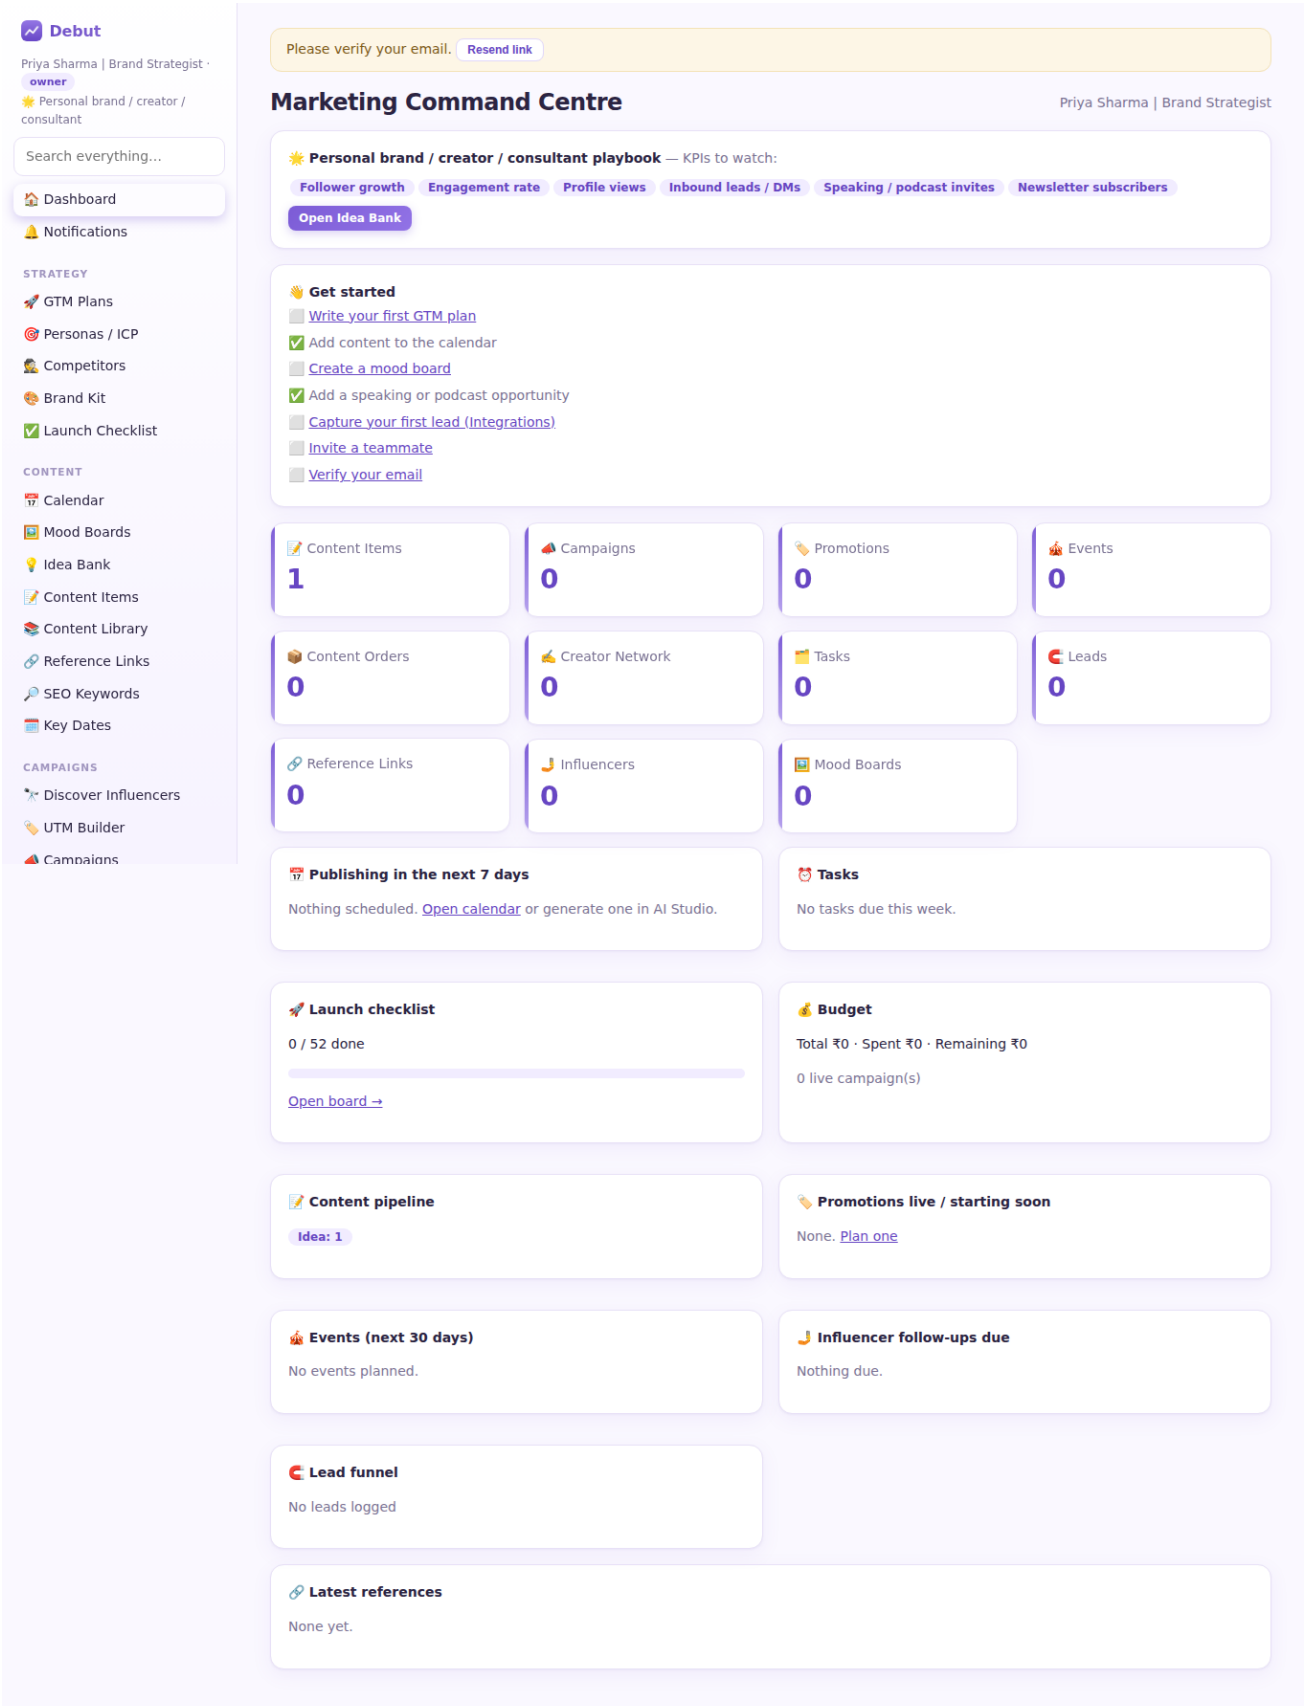

A Client reviewing one piece of content

The copy, call to action and hashtags for their approval, a shared conversation thread with the team, and one-click Approve or Request changes.

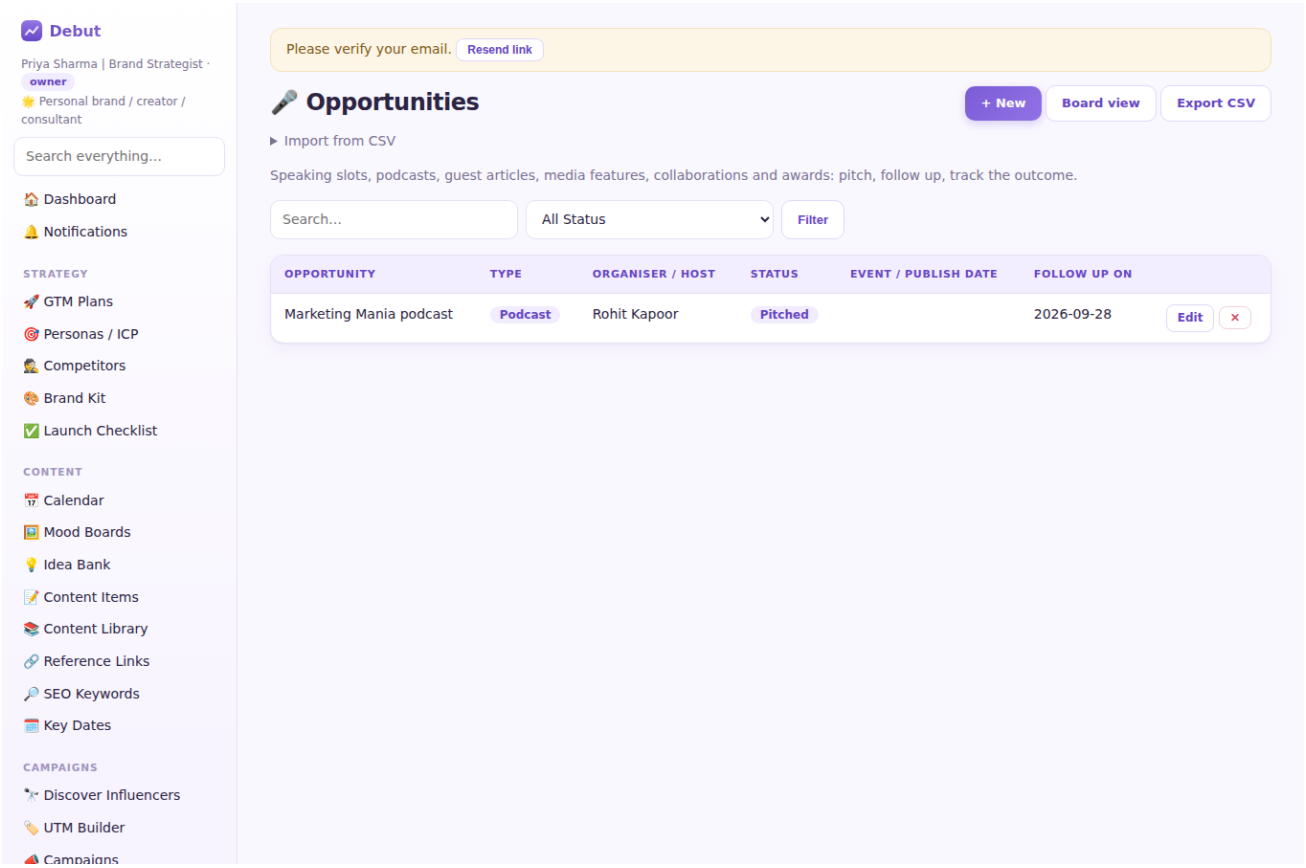

7. Three more industries, one app

The same product reshapes itself for the industry chosen at sign-up. Two more examples, alongside the hospitality workspace already shown.

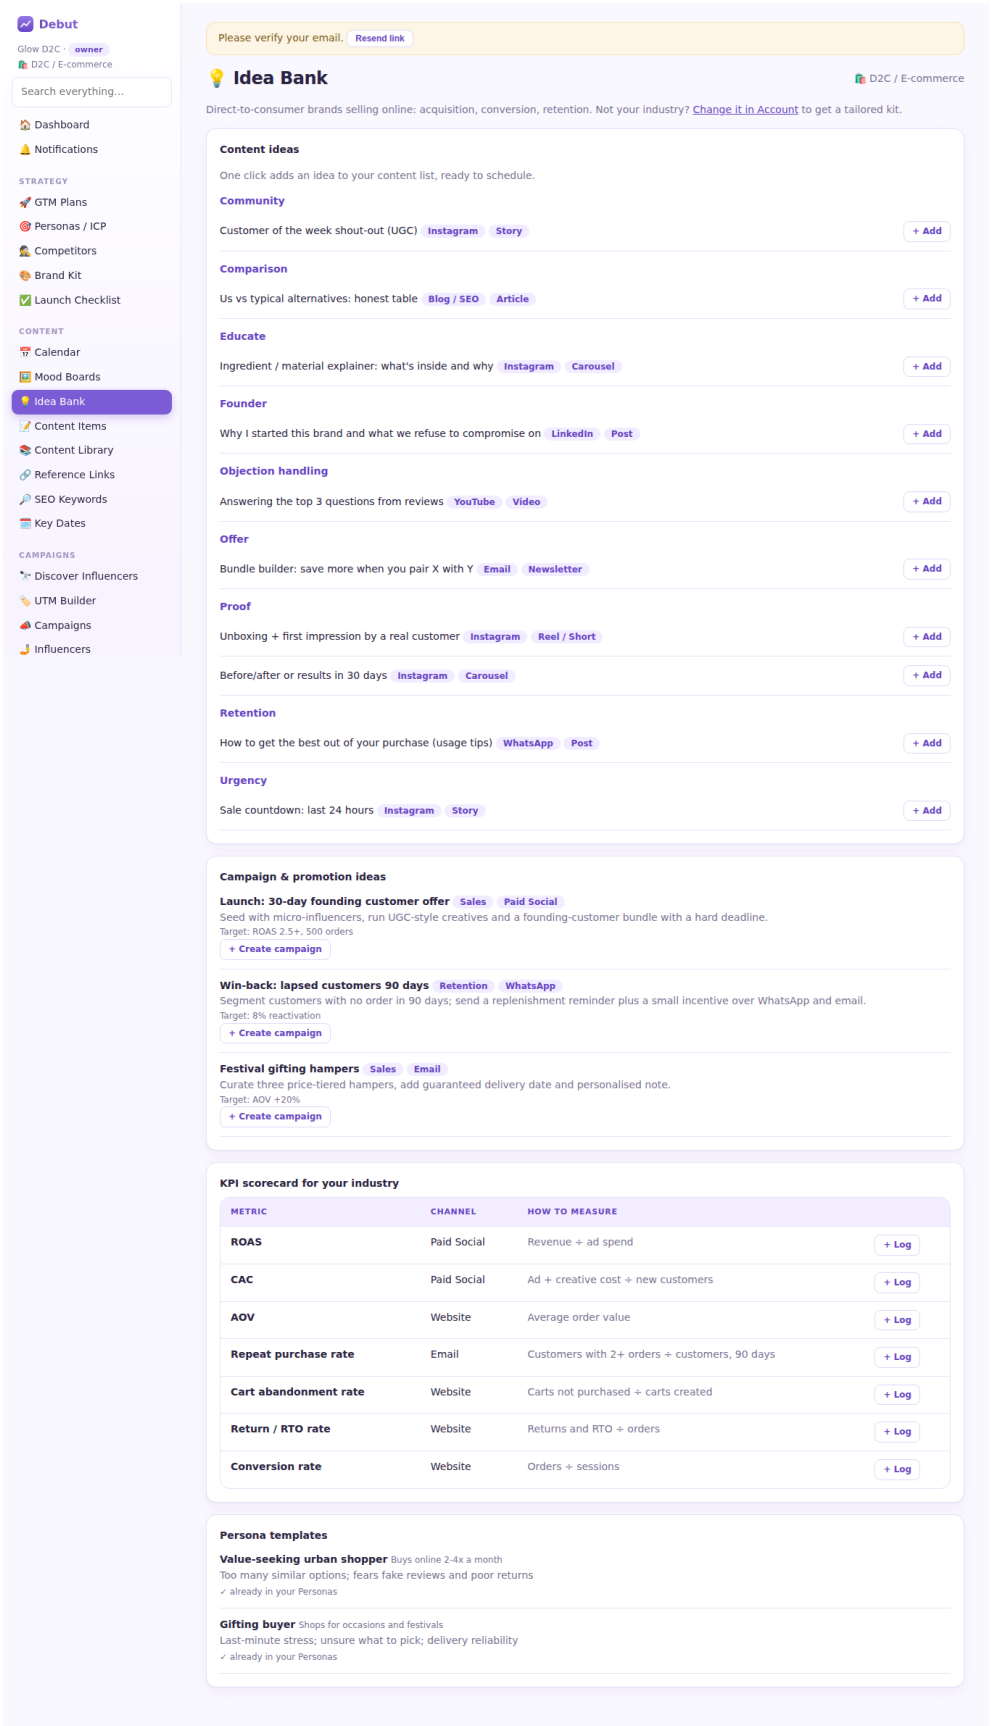

A personal brand's dashboard

Priya Sharma, a brand strategist, sees a playbook built for personal brands: follower growth, engagement rate and inbound leads as the KPIs to watch.

Opportunities: podcasts, talks and features

A pipeline made for personal brands and consultants: pitch, follow up, and track the outcome of speaking slots, podcasts and guest articles.

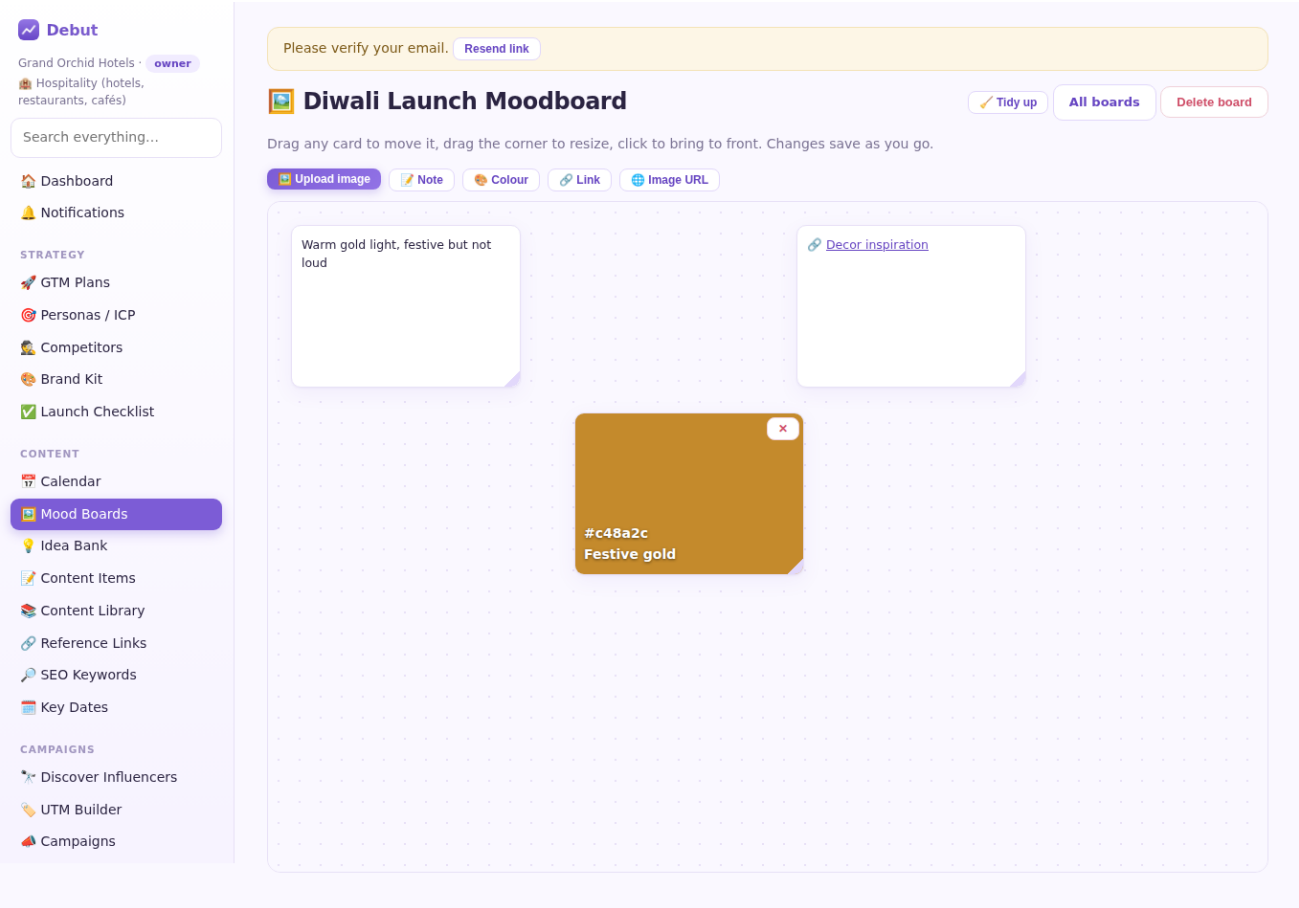

A D2C brand's Idea Bank

Glow D2C sees content ideas about unboxing and proof, campaign ideas like a founding-customer offer, and D2C-specific KPIs: ROAS, CAC, AOV and return rate.

8. New: brand colours, a freeform mood board, and a first-time tour

Three additions since the first version of this tour, shown on real workspaces below.

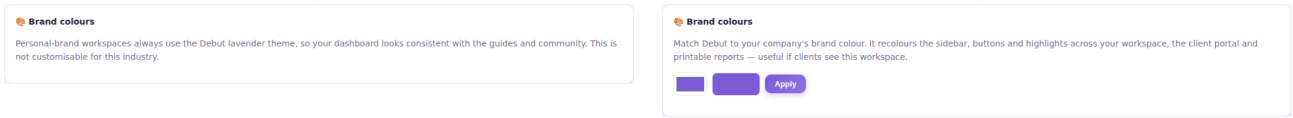

Mood boards, rebuilt as a freeform canvas

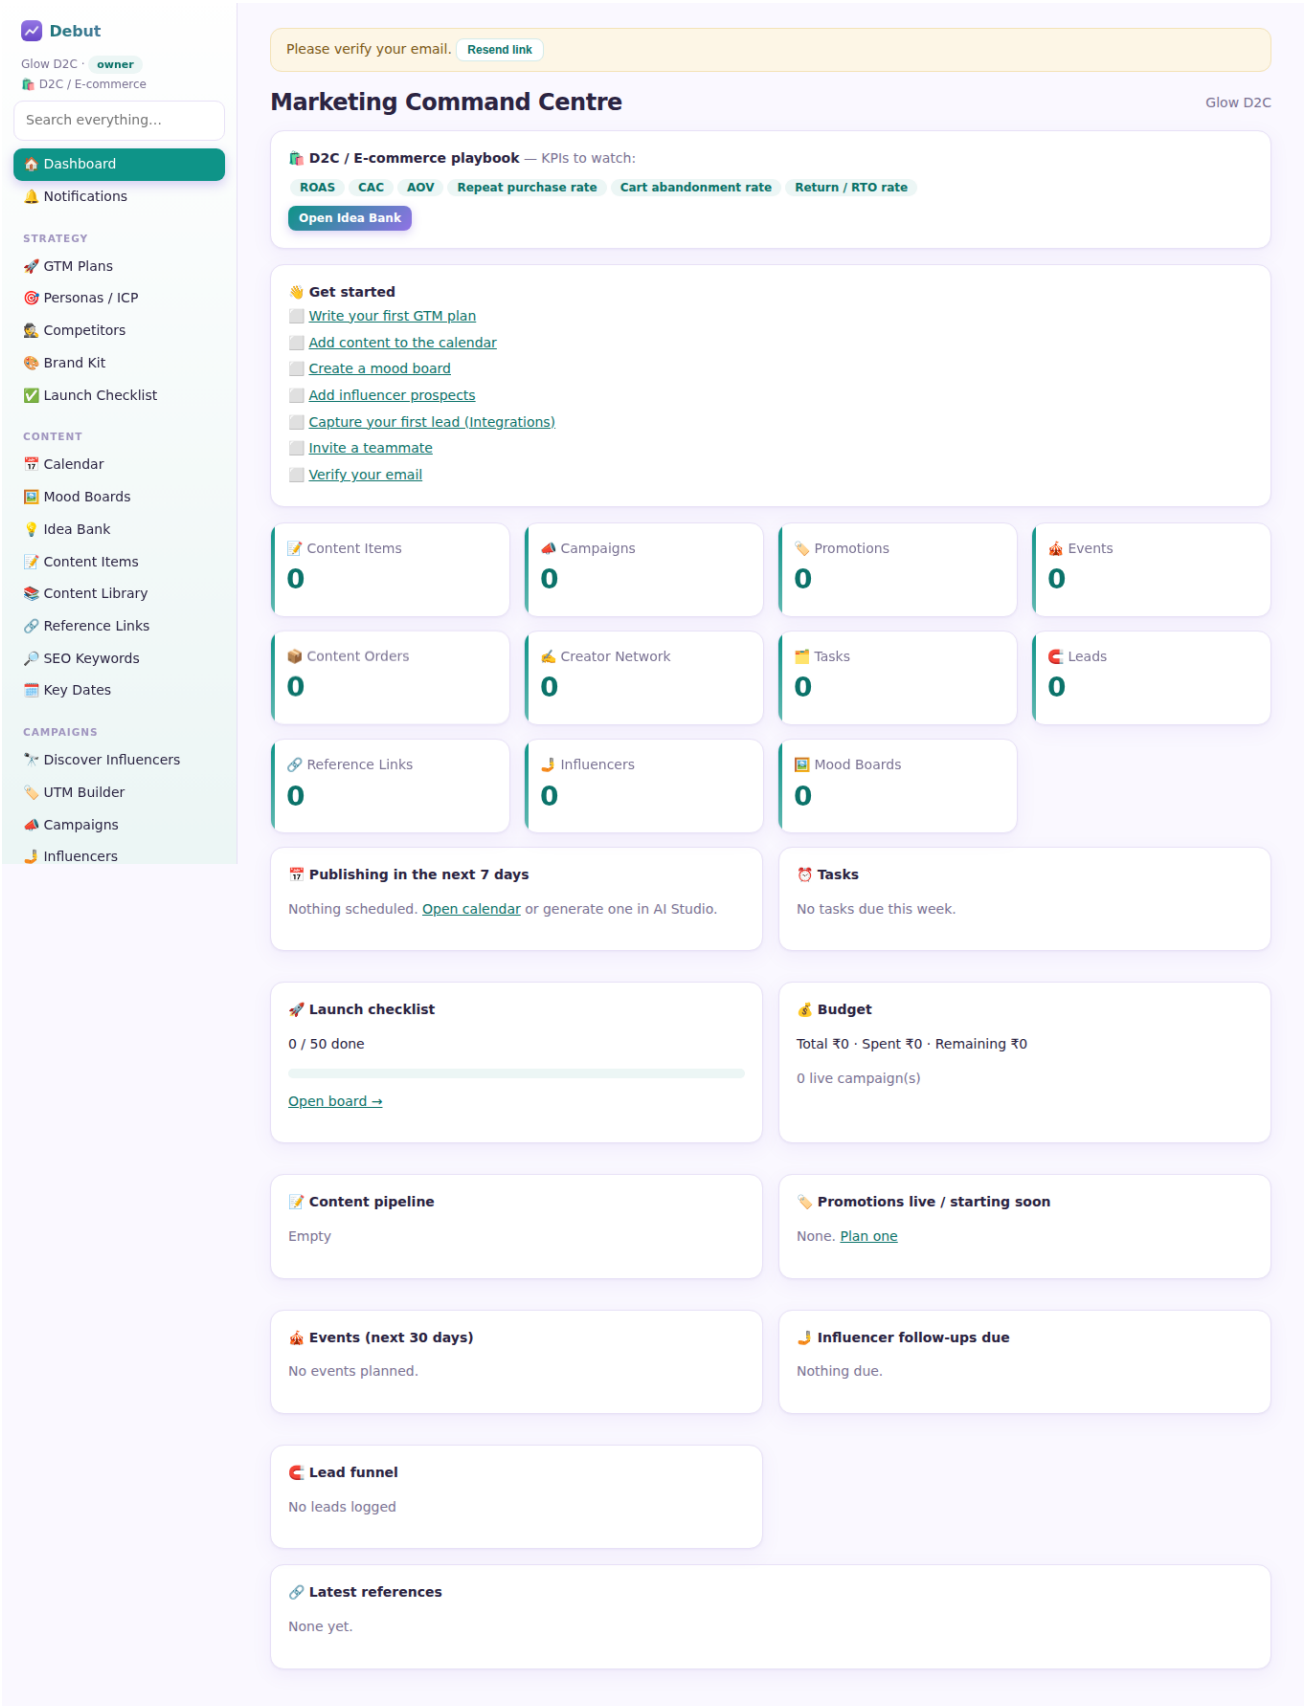

Every card — note, image, colour, link — can be dragged anywhere and resized by its corner, Miro-style. Positions save instantly, and a "Tidy up" button snaps everything back into a clean grid.

Brand colours: lavender for personal brands, your colour for everyone else

Personal-brand workspaces always keep the Debut lavender theme, so the look stays consistent with the guides and the community. Every other industry can set one brand colour that recolours the sidebar, buttons and highlights across the whole workspace, the client portal and printed reports.

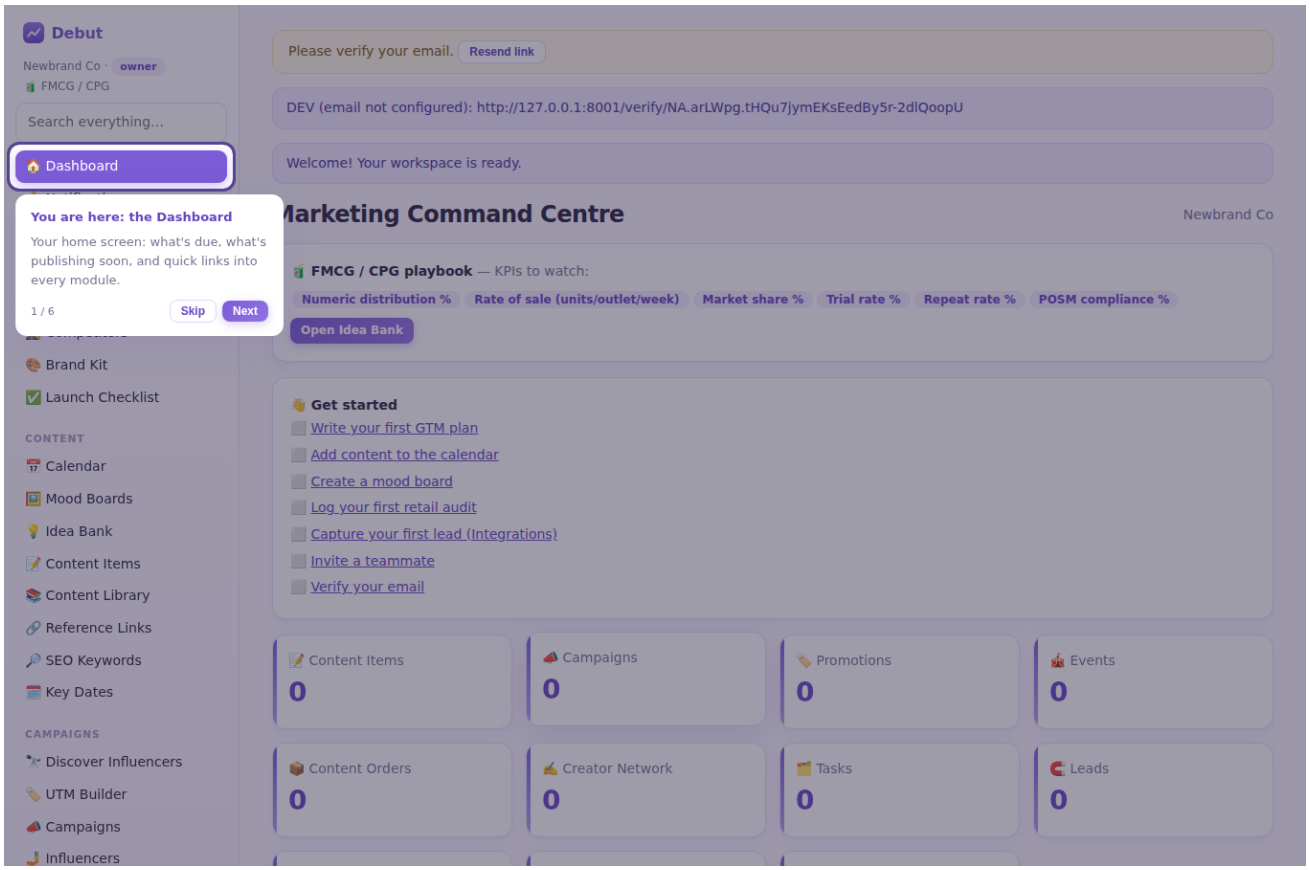

Left: a personal-brand workspace, locked to lavender. Right: a business workspace (Glow D2C), free to choose its own colour.

The effect, applied

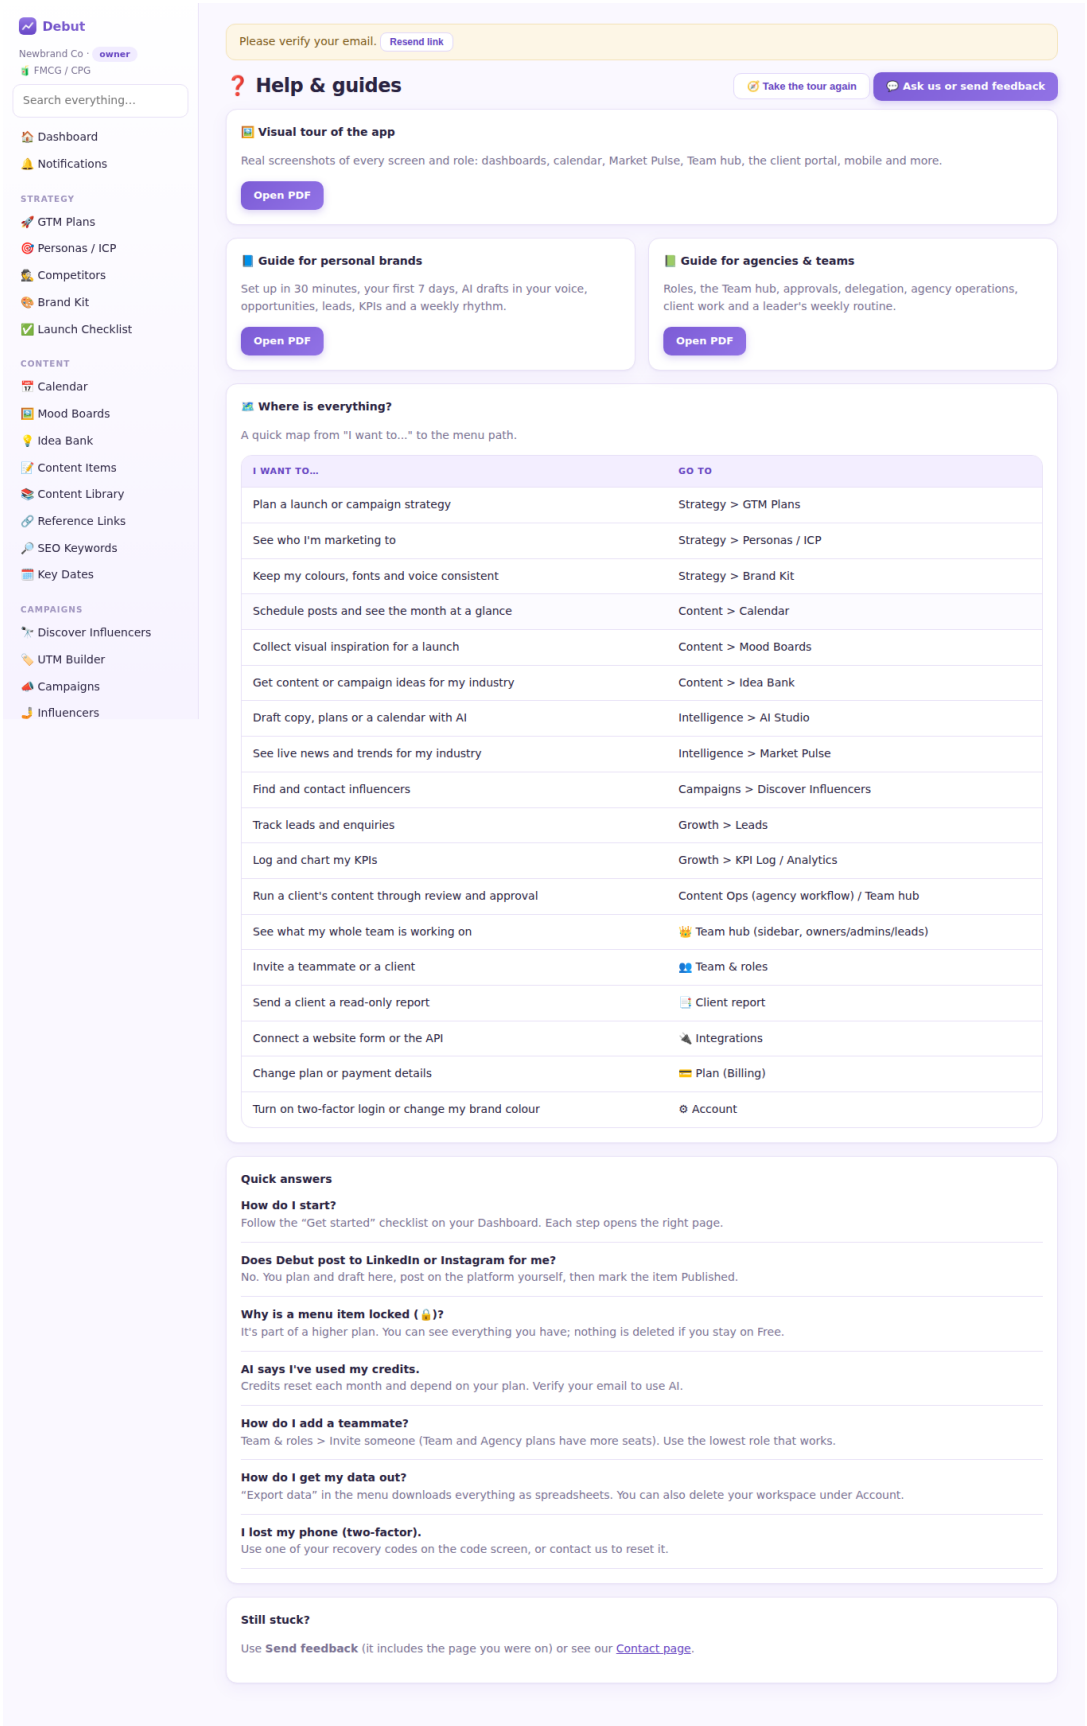

Glow D2C set a teal brand colour. Every purple accent across the whole app — sidebar, buttons, badges, progress bars — switched to match, instantly.

Help for first-time users

A short guided tour on first login

New users are walked past the Dashboard, the module menu, Search, Notifications, Help and Feedback, with Skip / Next controls. It runs once automatically and can be replayed any time from the Help page.

“Where is everything?” on the Help page

A plain-language map from “I want to…” to the exact menu path, for anyone who’d rather read than click around.

What you're looking at

Every screenshot in this document was taken from a real, running copy of Debut, seeded with realistic sample data for a hospitality business, a personal brand and a D2C brand. Nothing here is a mock-up. Your actual workspace will look exactly like this from the day you sign up.
